CONTENTS

1 CHAPTER I
INTRODUCTION

1.1 Corrosion as a phenomenon
  1.1.1 pH effect

1.2 Corrosion of steel in concrete structures
  1.2.1 Permeability and reactant transport
  1.2.2 Corrosion of steel reinforcement
  1.2.3 Structural deterioration
  1.2.4 Effect of corrosion on reinforced concrete
  1.2.5 Cracking
  1.2.6 Delamination
  1.2.7 Spalling
  1.2.8 Loss of structural strength

1.3 Use of polymers in concrete construction

1.4 Corrosion protective measures in concrete
  1.4.1 Construction practice
  1.4.2 Protective coatings
  1.4.3 Alloy steel reinforcement
  1.4.4 Mineral admixture as corrosion inhibitors
  1.4.5 Cathodic protection

1.5 Coating options for corrosion protective systems
  1.5.1 Electrostatic powder coating
  1.5.2 Metallic coating
  1.5.3 Inorganic coating
  1.5.4 Thermoplastic powder coatings
  1.5.5 Liquid protective coatings for reinforcement bars
  1.5.6 Conductive coating for reinforcement bars
  1.5.7 Coating to prestressing steel

1.6 Methodologies of corrosion evaluation of steel in concrete structures
  1.6.1 Open circuit potential measurements (OCP)
  1.6.2 Surface potential measurements (SP)
  1.6.3 Polarization resistance technique
  1.6.4 Guard ring technique
  1.6.5 Impedance technique
