List of Figures

Figure 1.1 Database driven Business Application Scenario ...........................................2
Figure 1.2 Rate of increase in digital data storage : Courtesy: Nasscom-Crisil report ....3
Figure 2.1 IBM’s Autonomic Computing Framework ..................................................14
Figure 2.2 Autonomic tuning Knowledge framework : Source – G. Rabinovich ........15
Figure 2.3 Self-Tuning Memory Manager Overview : Source A. Storm [25], 2006 ....22
Figure 2.4 Working of Cost-benefit Analysis ............................................................23
Figure 2.5 Automated Shared Memory Architecture ..................................................24
Figure 2.6 Memory segmentation for use in different workload environments ....27
Figure 2.7 Phases of Physical Database tuning [ Courtesy : Microsoft Labs.] .........30
Figure 2.8 Self-healing architecture using Monitoring hooks ............................37
Figure 3.1 Memory Structure of Oracle 10g : Source Oracle Technology Network ....52
Figure 3.2 Experimental Setup used in finding tuning parameter characteristics ........55
Figure 3.3 Effect of DB_CACHE size on Query Response-time ..............................56
Figure 3.5 Effect of LARGE_POOL size on Query Response-time ...........................58
Figure 3.6 Effect of Db_cache on response time with TPC-H Workload ..............58
Figure 3.7 Effect of Shared Pool on Response time with TPC-H workload .............59
Figure 3.8 Effect of Large pool on Response-time under TPC-H workload .............59
Figure 3.8.1 Response-time V/s Db_chace under TPC-E workload ....................60
Figure 3.9 Effect of Large pool on Database Cache .................................................61
Figure 3.10 Effect of shared pool on Db_cache_size .................................................61
Figure 3.11 Effect of Large pool on Shared_pool .....................................................62
Figure 3.12 Effect of Shared pool on large pool ....................................................62
Figure 3.13 Effect of Db_cache on Large Pool ......................................................63
Figure 3.14 Effect of Db_cache on Shared Pool .....................................................63
Figure 3.15 Effect of workload type on Buffer Hit Ratio (BHR) .........................66
Figure 3.16 Memory Model for Query Execution in DBMS ............................69
Figure 3.17  Response-time V/s DB Cache graph ........................................................ 70
Figure 3.18 Query Response time v/s Buffer size ...................................................... 71
Figure 4.1 A 3-layer Neural network setup ............................................................... 77
Figure 4.2 A Self-tuning Architecture based on MAPE autonomic paradigm .......... 80
Figure 4.3. Neural Network based tuning system ..................................................... 81
Figure 4.5 : Query response time v/s User-load for TPC-C Workload SF=5 .......... 86
Figure 5.1 The Fuzzification of User load with Gaussian membership function .... 91
Figure 5.2 Fuzzification of DB_Cache tuning parameter ........................................... 92
Figure 5.3 The General Self-tuning architecture using Fuzzy Inference System .... 93
Figure 5.4. Fuzzy controlled based self-tuning architecture ..................................... 94
Figure 5.5 Computation of Output parameter of the Fuzzy inference system ......... 94
Figure 5.6 : Response-time v/s Userload using Fuzzy based self-tuning ............... 96
Figure 6.1. Autonomic Computing with Neuro-Fuzzy self-tuning ......................... 101
Figure 6.2 Neuro-Fuzzy controlled auto-tuning system .......................................... 101
Figure 6.3  Basic Neural Network Structure with two hidden layers .................... 103
Figure 6.4a. Performance comparison of Neuro-fuzzy approach(Current Run) with Auto-
tuning feature of the DBMS.(SF=2) (28% improvement) ...................................... 106
Figure 6.4b. Performance comparison of Neuro-fuzzy approach(Current Run) with Auto-
tuning(Run20) feature of the DBMS.(SF=5) (6.5% improvement) ......................... 106
Figure 6.5. Memory Usage : Neuro-Fuzzy V/s Auto-Tuning ................................. 107
Figure 6.6c : Response time V/s User load for TPC-H(DSS) Workload .............. 108
Figure 6.6d : Response time V/s User load for TPC-D(DSS) Workload .................. 108
Figure 6.6e Throughput comparison under TPC-E Workload .............................. 109
Figure 6.7 Distributed database environment ....................................................... 110
Figure 6.8 Distributed Tuning Result comparison .................................................. 111
**List of Tables**

Table - 1.1 Comparison of Users of E-Business-type Applications in 2007 and 2008.....3  
Table - 3.1 Workloads and their characteristics..............................................................51  
Table - 3.2 BHR values for User load V/s Scaling Factor ........................................65  
Table - 3.3 Boundary values and other constants .......................................................72  
Table - 4.1 Effect on Response-time due to increase in Db_Cache..........................83  
Table - 4.2 The Neural Network Training Data Set for the Workload Type TPC-C.....83  
Table - 4.3 Training dataset for TPC-H workload type.............................................84  
Table - 5.1 Fuzzy Inference Rules .................................................................95
