Chapter 8

Futurology
FUTUROLOGY

The disease measles continues to be a problem as the expanded immunization programme does not cover 100% of the children in India, due to ineffective vaccination as the approach to the very remote rural areas and tribal areas is difficult, lack of roads and pathways. Hence, it is necessary to be aware of the neurological complications of measles, particularly SSPE that requires attention. Our work has been on a limited scale, further work may enlightened these complications with full coverage of the genotypes which may be of wild strains and the use of variance of vaccine. This scope of study is for future workers in the field.
