Acknowledgements

I would like to express my sincere gratitude to my Ph.D. thesis supervisor Dr. Rakhi Dasgupta, Dept. of Biochemistry and Biophysics, University of Kalyani for her continuous support and thorough guidance during the entire period. It would not have been possible to put together this thesis and associated research works without her sincere mentoring. Her thoughtful ways of crossing a hurdle despite all odds have been a source of inspiration during this entire period, especially on overcoming challenges associated with Ph.D. research.

I am also equally grateful to Dr. Angshuman Bagchi, Dept. of Biochemistry and Biophysics, University of Kalyani for his throughout technical guidance and pursuance. He has always been a source of motivation for hard work and his way of motivating students through own examples and hard works have always encouraged me. I am very much thankful to him for allowing me to undertake such variety of works that I have been able to put together in this thesis.

I am thankful to CSIR, MHRD, Govt. of India for funding my Ph.D. research. This research fellowship not only supported me during this entire duration but also provided the much needed funds for attending conferences across several renowned institutions in India. These conferences have been an opportunity to interact with other faculty members and students working in related areas of research from different parts of India and abroad. Similarly I have been also able to showcase my own research to a larger national and international audience via such conferences.

All the other faculty members and Ph.D. departmental committee members of the Dept. of Biochemistry and Biophysics, University of Kalyani have always been very supportive and provided valuable technical inputs to improve the quality of research undertaken in my Ph.D. tenure. Heartiest thanks and sincere gratitude will never be sufficient for making this entire period a scientifically enjoyable one. Among these highly respectable faculties, I am especially thankful to Prof. Tarakdas Basu, Prof. Tapan Kumar Das and Prof. Rita Ghosh for their support, encouragement and constructive comments.

Lab members and peers are always the person in need as well as the person to depend on every occasion. My dream of obtaining a Ph.D. to continue my journey with science would never become a reality unless it was the un-conditional help from Debanjan and Riya during my crucial period of transition. They have always supported me in all possible manners. No words can express how much I am thankful to them. Similarly I am very much thankful to Semanti, Sujay, Mousumi and Ratan for providing a highly productive and dependable and trust-worthy environment. I am grateful for the ways they have made me a part of the entire Ph.D. scholars’ community from the very first day. Without such a highly productive and knowledgeable peer circle, it would have been impossible to undertake technically challenging yet novel research works. They have also been a continuous source of technical inputs and constructive comments. I would always cherish the
memories of those beautiful moments spent in company of such great peers, all of whom also happen to be excellent human beings. In this same period, I have come across a few other humble, aspiring, motivated and hardworking individuals who also became my peers in due course. Thus I am also thankful to Sanchari, Ria, Nil and Ananya for giving me the opportunity to pass on technical and translatable skill to them. This in turn has helped me immensely to grow as an individual as well as a researcher. Their enthusiasm and dedications have been a significant part of encouragement to continue a career with science. I also feel privileged to be a part of highly motivated and hardworking research scholar pool that is being nourished by the faculty members of the Dept. of Biochemistry and Biophysics, University of Kalyani.

A host institution plays a major role in supporting any Ph.D. candidate and my home University; the University of Kalyani is no exception. It has always provided me the resources, academic and administrative support required to advance my career with a Ph.D. degree. I am also thankful to DST, Govt. of India and University of Kalyani for providing me travel grants to participate and present posters in two conferences through their collaborative DST PURSE program.

Academics, research, Ph.D. are a part of our career and we all aim to reach as high as possible in this arena. In pursuit of higher achievement, often family and friends are the ones who also become indirectly involved without any benefit. The level of unconditional support they provide, the level of sacrifices they make can never be compensated in any manner. I therefore would like to provide my deepest level of gratitude and thanks to my immediate and extended family and to those friends who always provided a company to cherish for lifetime.

Ph.D. is a long and rigorous academic endeavor and it involves a lot of persons in different manner. Starting from departmental support staffs to university administrative office bearers; a harmonious co-ordination is required at every stage for successful completion of this entire tenure. Right from Ph.D. admission to thesis submission and defense, a significant number of people play highly important roles. Often help from outside institutions or Universities also prove to be beneficial. Similarly in my case also, there have been a number of people who proved to be highly supportive and valuable. I am thankful to all of them whether named or un-named in above sections.
