Specific changes in the glycoprotein components of serum amyloid in pregnancy.

Calcium oxalate renal calculi induced in rats by \( B_6 \) deficiency.
Am. J. Pathol. 33, 671-72.

Production of calcium oxalate calculi in vitamin \( B_6 \) deficient rats.
Lab. Invest. 2, 7.

Modified Polia's method for the measurement of urinary creatinine and creatine.

Proteins and other bio-colloids of urine in health and calculous disease I - electrophoretic studies at pH 4.5 and 6.6 of components soluble in \( HCl \).

Organic matrix of urinary calculi.
Acta radiol. 22, 543-60.

Determination of glycogen, lipids and proteins in hepatic needle biopsy.

The scope of the transmission reaction in animal tissues.

Interactions among magnesium, vitamin \( B_6 \), sulphur and phosphorus in the formation of kidney stones in the rat.
J. Nutr. 61, 60-66.
    A simple method for the isolation and purification
    of total lipids from animal tissues.
    J. Biol. Chem. 226, 497.

    The colorimetric determination of phosphorus.
    J. Biol. Chem. 66, 379-400.

    Prevention of oxalate and phosphate lithiasis by
    Alanine.
    Invest. Urol, 12, 017, 50-53.

    Endogenous oxalate synthesis and Glycine, Serine
    decarboxyl pyridoxine, inter-relationships in Vitamin B6
    deficient rats.
    J. Biol. Chem. 234, 2391-93.

    Production of urinary calculi in Vitamin B6 deficient
    male, female and castrated male rats.

    Effect of daily magnesium oxide on the Vitamin B6
    administration to patients with recurring calcium
    oxalate kidney stones.

    Excretion of urinary metabolites in calcium oxalate
    urolithiasis - Effect of tryptophan and B6 administrating

    Dietary magnesium, Calcium, Vitamin B6, and experimental
    nephropathies in rats; calcium oxalate calculi, apatite
    nephrocalcinosis.
    J. Nutr. 72, 206.

    Calcium oxalate renal calculi induced in rats by B6
    deficiency.
    Amer. J. Pathol. 32, 671-2.
Polyunsaturated acid in hypercholesterolemia, induced in pyridoxine deficient rats.

Alterations in the blood fatty acids in single and combined deficiencies of essential fatty acids and Vitamin E, in monkeys.
Arch. Biochem. Biophys. 44, 405-16.

21. Hollman, L. and Burns, J.J. (1938)
Metabolism of L-ascorbic acid - 10 in man.
J. Biol. Chem. 210, 929-930.

22. Hooper, J. (1906)

The oxidation of glycemic acid by liver enzyme.
J. Biol. Chem. 210, 269-290.

A colorimetric method for the estimation of cholesterol.

25. Leodsdale, L. and Sutor, D.J. (1969)

Calcium oxalate lithiasis produced by pyridoxine deficiency and inhibition with high magnesium diet.
Invest. Urol. 4, 133-142.

Experimental oxalate lithiasis produced with ethylene glycol.
Invest. Urol. 4, 143.
External factors in the genesis of urolithiasis.
Renal stone research symposium, ed. by Hodgkinson, A. and Nordin, B.L.O.J.A.
Churchill Ltd. p.59-64.

29. McCarrison, R. (1931)
The causation of stones in India.

Chemical Composition of urinary calculi in preschool children and of the drinking water in the Armenian SSR.
Chem. Abstr. 67, No.98467 V.

Effect of decy pyridoxine induced Vitamin B, deficiency on polyunsaturated fatty acid metabolism in human beings.

Estimation of Magnesium in serum using titan yellow.
J. Clin. Pathol. 19, 162.

Renal stone of calcium phosphate. Physicochemical basis for this formation. Renal stone research symposium,
ed. by Hodgkinson and Nordin, B.L.O.

Studies in urolithiasis I. The composition of Urinary calculi.
J. Urol. 57, 949-91.

Nutritional aspects of calculous disease of the urinary tract.
