LIST OF FIGURES

Chapter 3
1 Map of South India showing locations of sample collection 22

Chapter 4
1 Fluorescent Pseudomonas spp. colonies on S2 agar showing fluorescence in UV and Bacillus spp. colonies on nutrient agar 42
2 PGP traits of rhizospheric Bacillus isolates of cocoa 45
3 PGP traits of endophytic Bacillus isolates of cocoa 46
4 PGP traits of rhizospheric fluorescent Pseudomonas isolates of cocoa 47
5 PGP traits of endophytic fluorescent Pseudomonas isolates of cocoa 47
6 Functional traits of isolates of fluorescent Pseudomonas spp. and Bacillus spp. 48
7 Effect of PGPR treatment showing enhanced root development of cowpea seedlings as compared to uninoculated control under plant growth chamber conditions 51
8 Enhanced shoot development of cowpea seedlings due to PGPR treatment as compared to uninoculated control under greenhouse studies 56
9 Colony morphology of selected fluorescent Pseudomonas spp. and Bacillus spp. 67
10 Dendrogram showing relationship between the metabolic profile of fluorescent Pseudomonas isolates 70
11 Dendrogram showing relationship between the metabolic profile of Bacillus isolates 71

Growth of rhizospheric *Bacillus* isolates at different pH levels.

Growth of endophytic *Bacillus* isolates at different pH levels.

Growth of fluorescent *Pseudomonas* isolates at different pH levels.

Production of IAA by selected PGPR.

Effect of incubation period on P-solubilization of selected fluorescent *Pseudomonas* isolates.

Effect of incubation period on P-solubilization by rhizospheric *Bacillus* isolates.

Effect of incubation period on P-solubilization by endophytic *Bacillus* isolates.

β-1,3-glucanase production by PGPR isolates.

Chitinase activity of selected PGPR isolates.

Production of salicylic acid by PGPR isolates.

PGPR inoculated cocoa seedlings in polybags under shaded net conditions.

Effect of individual inoculation of PGPR showing enhanced shoot development of cocoa seedlings after 6 months of inoculation.

Potent isolates selected for co-inoculation studies.
