

LIST OF TABLES

Table no.	Description
2.1	Common manifestations associated with severe form of <i>S. dysenteriae</i> type 1 infection
2.2	List of antibiotics that are no more recommended for treating shigellosis
2.3	Toll like receptors, cytokines and interleukins playing role in activation of immune system
2.4	Cytokines expressed in intestinal mucosa upon <i>Shigella</i> infection
2.5	Commonly used prebiotics available in market
2.6	Prebiotic manufacturing companies
2.7	Potential probiotic candidates
2.8	Criteria for probiotic selection to be used for human consumption
2.9	Antimicrobial activity of lactobacilli against various pathogenic microorganisms
2.10	Probiotics mediated health benefits
2.11	Clinical studies on probiotic potential to prevent/treat digestive disorders
2.12	Classification of bacteriocin
2.13	Antimicrobials produced by lactobacilli and their respective mode of action
2.14	Modulation of immune system on probiotic lactobacilli intake
2.15	Lactobacilli mediated immune system activation to combat pathogen mediated infections
2.16	Commercialized probiotic strains approved by US-FDA
2.17	Anti- <i>Shigella</i> activity possessed by lactobacilli
2.18	Probiotic lactobacilli and mechanism behind inhibiting <i>Shigella</i> mediated infection
3.1	Sources of chemicals/enzymes/media/kits/reagents and other materials used in the study
3.2	List of instruments used in the study
3.3	Lactobacilli treatment groups
3.4	Setup model for Caco-2 cells monolayer infection by <i>Shigella</i>
3.5	Probiotic treatment sets design for treating Caco-2 cells infected with <i>S. dysenteriae</i>

3.6	Experiment groups under each treatment set
3.7	Experimental groups for performing MTT assay
3.8	Quantity and quality assessment of RNA samples
3.9	Reaction set 1 for cDNA synthesis
3.10	Reaction set 2 for cDNA synthesis
4.1	Colony characteristics and Gram character of lactobacilli isolates
4.2	Morphological and biochemical characteristics of isolates
4.3	Probiotic attributes of lactobacilli isolates
4.4	Sugar utilization by lactobacilli isolates
4.5	EZtaxon results of 16SrRNA sequence similarity search of isolates
4.6	Adhesion percentage, adhesion score and SAT value of lactobacilli isolates
4.7	Anti-microbial activity of lactobacilli isolates
4.8	Antibiotic susceptibility pattern of lactobacilli isolates
4.9	Anti- <i>Shigella</i> activity of LCFS adjusted at different pH.
4.10	Anti- <i>Shigella</i> activity of LCFS exposed to different temperatures
4.11	Anti- <i>Shigella</i> activity of LCFS on treatment with detergents
4.12	Anti- <i>Shigella</i> activity of LCFS treated with enzymes
4.13	Anti- <i>Shigella</i> activity of proteins precipitated from LCFS
