**List of Table**

**Table 1**: Recent Studies curried out to deliver drug molecules to the Brain via Nasal Route

**Table 2**: List of Chemicals used with Grade and Manufacturer

**Table 3**: List of Instruments Used

**Table 4**: % Transmittance for plotting ternary phase diagram

**Table 5**: Concentration Ranges of Castrol oil (oil), Tween 80 (Surfactant), PEG 400 (Cosurfactant) and water.

**Table 6**: Developed Formulas of Ropinirole HCL

**Table 7**: Composition of Selected microemulsion Formulations

**Table 8**: List of Chemicals used and suppliers

**Table 9**: List of instruments used

**Table 10**: Composition of Ropinirole HCL Microspheres

**Table 11**: Standard plot of Ropinirole Hydrochloride in 6.6 phosphate buffer

**Table 12**: FTIR Spectra of Drug and polymers

**Table 13**: Solubility of Ropinirole Hcl drug in Oils

**Table 14**: Solubility of Ropinirole Hcl drug in Surfactants and Co-surfactants

**Table 15**: Solubility of Ropinirole Hcl drug in Buffers

**Table 16**: Viscosity of microemulsion Formulations

**Table 17**: Refractive Index of microemulsion Formulations

**Table 18**: pH of the formulations

**Table 19**: Cloud Point of Formulations

**Table 20**: % Drug content of formulations

**Table 21**: Diffusion study profile of Formulations F1 to F5

**Table 22**: Diffusion study profile of Formulations F6 to F10

**Table 23**: Particle size analysis and Zeta potential

**Table 24**: Ropinirole Hydrochloride concentration–time profiles after intranasal administration

**Table 25**: Ropinirole Hydrochloride concentration–time profiles after intranasal administration of Micro emulsion and IV administration of PDS in rats blood (B).

**Table 26**: Pharmacokinetics parameters of Ropinirole Hydrochloride following nasal and intravenous administration.

**Table 27**: Standard plot of Ropinirole Hydrochloride in 6.6 phosphate buffer

**Table 28**: Relationship between % compressibility and flowability

**Table 29**: Relationship between Hausner’s Ratio and Flow property

**Table 30**: Results of the micrometric properties of formulations F1-F21
Table 31: Data of Evaluation Parameters of formulations F1-F21
Table 32: Data of Swelling index of formulations, F1-F21
Table 33: Dissolution profile at pH 6.6 phosphate buffer for Ropinirole HCL loaded Chitosan microspheres
Table 34: Dissolution profile at pH 6.6 phosphate buffer for Ropinirole HCL loaded carbopol974P microspheres
Table 35: Dissolution profile at pH 6.8 phosphate buffer for Ropinirole HCL loaded guar gum microspheres
Table 36: Dissolution profile at pH 6.6 phosphate buffer for Ropinirole HCL loaded optimized formulations
Table 37: Dissolution profile at pH 6.6 phosphate buffer for Ropinirole HCL loaded chitosan – Guar gum, Chitosan - carbopol974P and carbopol974P –Guar Gum microspheres
Table 38: Dissolution profile at pH 6.6 phosphate buffer for Ropinirole HCL optimized combination formulations
Table 39: Invitro drug release kinetics studies (Regression coefficient (r2)) of prepared Ropinirole Hcl microspheres
Table 40: Stability studies of formulation F15 as per ICH guidelines
Table 41: Stability studies of formulation F21 as per ICH guidelines
Table 42: Pharmacokinetic parameters of oral tablet and intranasal microspheres of Ropinirole Hydrochloride.
Table 43: Ropinirole Hydrochloride concentration–time profiles after intranasal administration of Microspheres and oral tablet
