Acknowledgment

My salutations to all my teachers who taught me with their wisdom, patience and discipline that “Knowledge: are the strength and the way of life.”

My life-long, undying gratitude and thankfulness to my guide, Dr. Alka M. Mankad. Her continuous, timely and insightful guidance, prompt feedbacks and extensive brainstorming sessions has helped me to gain better understanding of my subject and my life and has helped me to develop this thesis work. I am extremely thankful to her for being there for me irrespective of time, weather, distance or circumstances. Words can never justify my feelings or gratitude and respects for her.

I express my deep sense of gratitude, indebtedness and respect for my parents, relative, friends and classmates whose persistent encouragement, support, dedication, and hard work I would have never achieved this dream. The existence of this thesis would have been incomplete without their involvement.

My heart-felt gratitude to all participating patients and their families who selflessly has spent their precious time to share their thoughts and genuinely respond to the questionnaire. This has been the core of my work.

I thank Dr. Kalpesh Odedara (General Physician) and Dr. Sohang Bhadania (Psychiatrist) for helping me to understand the classification of cardiovascular disease and treatment of cardiovascular diseases.

I am extremely thankful to all government and private hospitals staff for his constant support and motivation to help me in my dream. I thank him for being my strength and supporting me in all my endeavors.
I also thankful to government of Gujarat who granted permission for collecting a samples when our, I needed.

Once again my sincere gratitude to my entire teachers, family, friends, colleagues, patients and everyone who has contributed in some or the other way from the conception to completion of this thesis work.

Mr. Dipak O Joshi
