Acknowledgements

“Research is to see what everybody has seen but think what nobody has thought.” Research involves collaborative efforts by team of persons striving to conquer new horizons in the different fields of sciences. This study would not have been completed without the encouragement, guidance and co-operation of my teachers, parents, friends, well-wishers and relatives. Getting such help, I feel, is comparable to our humanity. Almighty has given us a wonderful body in which organs and systems work together, synchronously to lead a healthy life. Similarly, my thesis work was like a human body where many people helped me in some or the other way for its successful completion. I would like to take this opportunity to express my deep gratitude towards all of them.

I wish to express my sincere thanks and profound respect towards my guide Dr. Aniket Kuvalekar (Diabetes Laboratory, Bharati Vidyapeeth University, IRSHA, Pune) with a deep sense of my gratitude for his guidance, invaluable advice, constant support, intellectual supervision and professional expertise he has bestowed upon me for the timely completion of my research work. I would also like to thank him for giving me freedom of thoughts and guiding me on the right path with the trust. I am proud to have him as my guide.

I am thankful to Dr. Akhilesh Mishra (Director, BVDU-IRSHA, Pune), Dr. Prabhakar Ranjekar (Former Director, BVDU-IRSHA, Pune) and Dr. Sahebrao Mahadik (Professor, Medical college of Georgia, Augusta, U.S.A.) for their support and invaluable guidance during my entire research work. I would like to thank Dr. Digambar Mokat (Assistant Professor, Savitribai Phule Pune University) for
providing plant material. I am also thankful to the Medicinal Plants Conservation Centre, Pune (MPCC) for identification and authentication of plant material. I would like to thank Dr. Omkar Kulkarni for providing ayurvedic expertise for preparation of satwa for my research work. I am also thankful to Mr. Ravi Mulik for his help in executing animal experiments.

My sincere thanks also go to Dr. Vijaya Pandit (Head, Department of Pharmacology, Bharati Vidyapeeth Medical College, Pune) for reviewing animal experiment protocols and Dr. Manjiri Karandikar (Associate Professor, Department of Pathology, Bharati Vidyapeeth Medical College, Pune) for her support in histopathological study in my research work.

A special note of thanks to my friend Mr. Abhijit Ghadge for his help and encouragement throughout the tenure of my thesis.

It will be very unfair if I forget my labmates Mr. Suresh Khadke and Mrs. Shubhangi Harke for giving their helping hands whenever and wherever required and maintaining lively atmosphere in lab. Their invaluable interactions always strengthened me emotionally and encouraged me for my work. I am grateful to my juniors Mrs. Amruta Mandhare, Mr. Suyash Pawar, Miss. Amruta Kakde for their cordial support throughout my research work.

I am fortunate to have parents like mine. My sincere thanks and appreciation to my mother Mrs. Kamal Patil, my father Mr. Bhimrao Patil, my mother-in-law Mrs. Sindhu Chavan and father-in-law Mr. Shivaji Chavan for their unconditional true love, affection, blessing, sacrifice and support which paved my path in life and the encouragement I needed to succeed.
I have no words to show my hearty gratitude towards my lovely son Atharva and husband Mr. Chandrakant who are my inspiration, support and true love.

My apologies as it is not possible to mention everyone’s name here but their blessings helped for successful completion of my work.

Last but not the least, I wish to express my gratitude towards “God almighty”, who gave me the strength and courage to fulfill my dream and bestowed his best blessings upon me always.

Thankful I ever remain.
