CHAPTER 2
OBJECTIVES
Objectives

1. To study the hepatoprotective efficacy of residual marc of aqueous extract of *Tinospora cordifolia*, *Tinospora sinensis* and *Neem-giloe* (*T. cordifolia* growing on *Azadirachta indica* A. Juss.) on acetaminophen and alcohol induced hepatotoxicity in rats at biochemical, histological and molecular level.

2. To study the effect of polyunsaturated fatty acid supplementation against acetaminophen and alcohol induced hepatotoxicity in rats at biochemical, histological and molecular level.

3. To study the combinatorial protective and corrective effect of nutritional and herbal interventions against acetaminophen and alcohol induced hepatotoxicity in rats at biochemical, histological and molecular level.
