Figure 1.24  ZigBee Alliance Logos........................................... 57
Figure 1.25  Wireless Wide Area Network................................. 64
Figure 3.1   The Bluetooth Image Wiring Diagram........................ 89
Figure 3.2   A piconet with a master and the maximum of seven active slaves......................................................... 90
Figure 3.3   A scatternet consisting of two piconets.................... 91
Figure 3.4   A Bluetooth device acts as a slave in two piconets..... 92
Figure 3.5   A Bluetooth master device becomes a slave in another piconet................................................................. 93
Figure 3.6   A Bluetooth unit pages another unit, outside its own piconet. ........................................................................ 94
Figure 3.7   A unit pages a piconet’s master and then makes a master/slave switch......................................................... 94
Figure 3.8   A unit wants to set up a new piconet....................... 95
Figure 3.9   Transferring of slaves to the new piconet, after the master/slave switch......................................................... 96
Figure 3.10  The Bluetooth Unit.................................................. 97
Figure 3.11  Glueless Bluetooth wireless technology interface....... 101
Figure 3.12  The Bluetooth Protocol.......................................... 104
Figure 3.13  Protocol Stack for File Transfer Applications............ 112
Figure 3.14  Dial-up Networking Protocol Stack......................... 112
Figure 3.15  Protocol Stack of LAN Access (PPP) Usage Model.... 113
Figure 3.16  Protocol Stack for Synchronization.......................... 114
Figure 3.17  Protocol Stack for Cordless Phone and Intercom Scenarios .......................................................... 115
Figure 3.18  Ultimate Headset Protocol Stack............................ 116
Figure 3.19  Piconet................................................................. 117
Figure 3.20  BWT Structure..................................................... 118
BWT-enabled devices hop between frequencies up to 1600 times per second.

A piconet consists of up to eight BWT-enabled devices.

A scatternet is two or more piconets connected by a common device.

The Scheme for Student Evaluation.

A Remote Stethoscope and A Remote Oximeter.

Bluetooth Wt11 and Wt12 modules.

Bluetooth Remote Control 2.0.

Bluetooth PC Dialer 2.0.

Bluetooth Lockitnow1.2 in PC.

Beamitnow1.2 in PC.

Kodak’s V610 Bluetooth Enabled Digital Camera.

Virtual Keyboard.

Bluetooth Helmet Headset.

Bluetooth Reuters.

Pcs the Span of a Pen.

The ZigBee.

Coordinator: network topology.

Router: network topology.

End Device: network topology.

Beacon Network Communication.

Non-Beacon Network.

The ZigBee Stack Architecture.

The four basic frame types defined in 802.15.4.

ZigBee protocol architecture.
