ACKNOWLEDGEMENT

The author is highly thankful to his respected Supervisor Dr. K. Sivakumar, Professor and Head of the department, Department of Mechanical Engineering, Bannariammann Institute of Technology, Sathyamangalam for his enthusiastic guidance, motivation and back-up to get this research work done.

The author profoundly wishes to thank the Doctoral Committee Members Dr A Noorul Haq, Professor, Department of Production Engineering, National Institute of Technology, Trichy and Dr R Saravanan, Principal, Shreenivasa Engineering College, Dharmapuri for their continuous monitoring of the research work and aspiration during the entire course of the work. The author is grateful to the Management and Dr A M Natarajan, Chief Executive and Dr D Saravanan, Principal, Bannariammman Institute of Technology, Sathyamangalam for providing necessary support and facilities to complete the work. The author wholeheartedly thanks Mr S Ganapathy, for offering timely help and suggestion to carry out this research work.

This work could have been a distant dream if I did not get the moral encouragement and help from my wife, Mrs C Gnaneshwari. She equally shared my success and failures with me. My son P Kabilan and my daughter P Kaavya missed me a lot and they have sacrificed many of their pleasant dreams for me. Finally, this thesis is the outcome of the sincere prayers showered by Almighty Bannariammman and Bannariammman Institute of Technology for providing infrastructural support and the dedicated support of my family.

PRAKASH E
