AIMS & OBJECTIVES
Aims and Objectives

The study was planned with an aim to screen the normal population of taller males for the existence of extra Y chromosome and to find aggression level in them. The following were the objectives of the present study:

1) To observe the level of aggression in taller males of North Indian population.

2) To correlate the level of aggression of taller males with demographic variables.

3) To screen the population of taller males for extra Y chromosome and to correlate it with aggression.
