# List of Tables

## Chapter 3

Table 3.1.1 SSPA Efficiency under Back – off

Table 3.1.2 Targeted Specifications of flexible output power SSPA

Table 3.11.1 Typical look up table for 20 watt GaAs MESFET amplifier
   (for EEPROM controller).

Table 3.11.2 Improvement in Efficiency and power consumption for 20-watt device

Table 3.11.3 Test data for 200 watt GaN Device without dynamic bias

Table 3.11.4 Test data for 200 watt GaN Device with dynamic bias

Table 3.11.5 Targeted versus achieved performance for 20 watt GaAs
   Device with dynamic Bias

Table 3.11.6 Targeted versus achieved performance for 200 watt GaN
   Device with dynamic Bias

## Chapter 4

Table 4.5.1 Stub Distances and lengths for different frequencies

Table 4.5.2 Performance by varying four capacitors

Table 4.5.3 Performance by varying two capacitors

Table 4.5.4 O/P power & efficiency at different frequency after load pull

Table 4.5.5 Measured result of a single stage 40 Watt amplifier

Table 4.5.6 O/P power & efficiency at different frequency after load pull

Table 4.5.7 Measured result of a single stage 200 Watt amplifier module

Table 4.6.1 Device performance at different frequency band with matching
   capacitor values

Table 4.6.2 O/P power & efficiency at center frequency 243 MHz with
   different bandwidth after load pull

Table 4.7.1 Measured result of two stage amplifier for different freq. by
   varying Varactor voltage

## Chapter 5

Table 5.7.1: Measured results of single stage versus balanced configuration
   of 100 Watt SSPA
Table 5.9.2: Measured results of single stage versus balanced configuration
of 150 Watt GaN SSPA

Chapter 7
Table 7.6.1: Measured Results of 100 Watt Amplifier Module
