ACKNOWLEDGEMENTS

The present investigations on the brain of Kashmir Fishes were started in the Post Graduate Department of Zoology, The University of Kashmir, Srinagar, India at the suggestion of Professor S.M. Das. I wish to record here my gratitude to him for suggesting the problem and also for guidance throughout the course of the present studies. His unstinted criticism and his personal literature was of great help to me. I am also thankful to him for full facilities provided in the Department and for putting the thesis in its present form.

Thanks are also due to Dr. G.J. Duin of the Northwestern Hospital, Minnesota, Minneapolis for his assistance in sending me valuable literature on the subject. I am grateful to Dr. R. Nieuwenhuys of Netherlands Central Institute for Brain Research, Amsterdam and to Dr. A.M. Schmitzlein of the University of Alabama, Birmingham for their valuable suggestions and useful reprints, which were of immense help in compiling the thesis. To Dr. Ariena J. Kappers, Director Institute of Brain Research, Amsterdam, I am indebted for lending me some valuable literature.

I am also thankful to my colleagues in the Department for their constant encouragement during the course of present studies.
