ACKNOWLEDGEMENTS

The subject of the thesis was suggested by Dr. S.M. DAS, Professor and Head, University Department of Zoology, Jammu and Kashmir University. The successful completion of the present work is due in the main to his unstinting help and continuous generous guidance throughout the course of the investigations. The author is greatly indebted to Prof. DAS for introducing me to the problem and for inspiration for research work even when things looked dark. Without this inspiration and guidance throughout the course (1965-67) of present studies, the work could not have been completed.

The author gratefully acknowledges the kind attitude of Dr. K. Ganpathi, Director Regional Research Laboratory, Jammu Tawi, for allowing her to change the venue of research from Jammu to Kashmir University, Srinagar. The author's thanks are also due to the Principal, Women's College, Srinagar, for allowing me residential accommodation in the Hostel at Srinagar, during the course of the present studies. The author is thankful to the C.S.I.R., for the award of a Junior Research Fellowship during the tenure of which these studies were completed.

In the end I would like to convey my thanks to Gulam Mohammad, the fisherman, and Subhana, the boatman, who always readily accompanied me to my daily routine of searching for the fish material and for new fish-spawning grounds.
