ACKNOWLEDGEMENTS

Much work has been done in the field of depression in other countries. In India, however, work in this direction has been very little, relatively. The present study is an attempt to ascertain the relationship of different symptoms, personal history facts etc. with prognosis of depression.

First and foremost, I would like to thank my guide Dr. D. N. Nandi, Professor and Head of the Department of psychological medicine, University of Calcutta. He spared much of his valuable time and energy for the study and took personal interest in the work. But for his inspiration and encouragement throughout the period, this study would not perhaps have seen the light of the day.

I also offer my heartfelt thanks to Dr. S.P. Mukherjee, Reader Department of Statistics, University of Calcutta, who gave valuable assistance in statistical analysis. His help was available throughout the work and he specifically arranged and supervised the analysis by computer.

I would also like to place on record my grateful thanks to Shri Somnath Bhattacharya, Reader, Department of psychology, University of Calcutta, for his valuable guidance in the course of the work.

Thanks are also due to the authorities of, Harmony Nursing Home (22, Parasur Road, Calcutta), R.G. Kar Medical College, Calcutta and to the patients and their attendants without whose co-operation it would not have been possible to carry on the work at all.

For the study, co-operation and help has in fact been...
received from so many quarters that it would not be possible to enumerate them all and thank them all individually. I, however, wish to place on record my sincere appreciation and gratefulness to all those who have contributed in any way to this endeavour.
