Contents

Chapter 1  General Introduction

1.1 Introduction  1-2
1.2 System parameters
1.3 Inventory costs
1.4 Area of work
1.5 Overview of the problems in the thesis

Chapter 2  Review of literature

2.1 Review of Inventory Models for Deteriorating Items with Shortages
2.2 Review of inventory models with time varying holding cost
2.3 Review of inventory models with ramp-type demand
2.4 Review of inventory models with dual storage system
Chapter 3  Inventory Model for Deteriorating Items with Stock-dependent Demand, Time-varying  Holding Cost and Shortages

3.1  Introduction  
3.2  Assumptions and Notations  
3.3  Mathematical formulation and solution  
3.4  Infinite time-horizon Model  
3.5  The finite Time-Horizon Model  
3.6  Numerical Examples  
3.7  Sensitivity Analysis  
3.8  Discussion  
3.9  Conclusion

Chapter 4  Inventory models with two-component demand and nonlinear holding cost with shortages

4.1  Introduction  
4.2  Assumptions and notations  
4.3  Mathematical formula and solution  
4.4.A  Nonlinear time-dependent holding cost  
4.4.B  Nonlinear stock-dependent holding cost  
4.5  Numerical example  
4.6  Sensitivity Analysis  
4.7  Conclusion
Chapter 5  Inventory models with ramp-type demand for deteriorating items with partial backlogging and time-varying holding cost

5.1  Introduction
5.2  Notations and assumptions
5.3.A Mathematical formulation of the model starting without shortages
5.3.B The optimal replenishment policy for the model starting without shortages
5.4.A The mathematical formulation of the model starting with shortages
5.4.B The replenishment policy for the model starting with shortages
5.5  Numerical example
5.6  Sensitivity analysis
5.7  Conclusion

Chapter 6  Two Warehouse Inventory Models for Deteriorating Products with Ramp-type Demand and Shortages

6.1  Introduction
6.2  Notations and assumptions
6.3.A Mathematical formulation of the model starting without shortages
6.3.B The optimal replenishment policy for the model starting without shortages
6.4.A The mathematical formulation of the model starting with shortages
6.4.B The replenishment policy for the model starting with shortages
6.5  Numerical example
6.6  Sensitivity analysis
6.7  Conclusion
