# LIST OF TABLES

1.1 Various combinations of failure and repair rates  

2.1 Variation in the reliability of the system with the change in software failure rates of application server  

2.2 Variation in the reliability of the system with the change in software failure rates of database server  

2.3 Variation in the reliability of the system with the change in software failure rates of routers  

2.4 Variation in the reliability of the system with the change in software repair rates of application server  

2.5 Variation in the reliability of the system with the change in software repair rates of database server  

2.6 Variation in the reliability of the system with the change in software repair rates of routers  

2.7 Sensitivity analysis of availability of system to software failure rates of application server and database server:  

2.8 Sensitivity analysis of availability of system to software failure rates of application server and router software  

3.1 Weights of edges  

3.2 Values of uncertain parameters  

3.3 Various combinations of failure and repair rates  

3.4 Values of input parameters  

3.5 Effect of varying repair rates of operating system failure on the availability of the system by taking the lowest values for failure rates of operating system and application server  

3.6 Effect of varying repair rates of operating system failure on the availability of the system by taking the nominal values for failure rates of operating system and application server
3.7 Effect of varying repair rates of operating system failure on the availability of the system by taking the high values for failure rates of operating system and application server

3.8 Sensitivity analysis of Availability of system to application server instance failure rate and operating system failure rate

4.1 Description about all the edges connecting various states

4.2 Values of uncertain parameters

4.3 Variation in the reliability of the system with varying software repair rates ($\mu$)

4.4 Variation in the reliability of the system with the varying software failure rates ($\lambda$)

4.5 Variation in the availability of the system for low values of $\lambda$, Low, Medium and High values of $\mu$ keeping $\lambda_s$ fixed

4.6 Variation in the availability of the system for medium values of $\lambda$, low, medium and high values of $\mu$ keeping $\lambda_s$ fixed

4.7 Variation in the availability of the system for high values of $\lambda$, low, medium and high values of $\mu$ keeping $\lambda_s$ fixed

4.8 Variation in the availability of the system for low values of $\lambda_s$ and low, medium and high values of $\mu$ keeping $\lambda$ fixed

4.9 Variation in the availability of the system for medium values of $\lambda_s$ and low, medium and high values of $\mu$ keeping $\lambda$ fixed

4.10 Variation in the availability of the system for High values of $\lambda_s$ and low, medium and high values of $\mu$ keeping $\lambda$ fixed

4.11 Variation in the availability of the system for Low values of $\lambda$ and $\lambda_s$
4.12 Variation in the availability of the system for Medium values of $\tilde{\lambda}$ and $\tilde{\lambda}$, and Low, medium and high values of $\bar{\mu}$

4.13 Variation in the availability of the system for high values of $\tilde{\lambda}$ and $\tilde{\lambda}$, and Low, medium and high values of $\bar{\mu}$

5.1 Description about all the edges connecting various states

5.2 Fuzzy triangular membership values for software failure rates

5.3 Fuzzy triangular membership values for software repair failure rates and low, medium and high values of repair rates

5.4 Variation in the reliability of system with the varying repair rates($\mu_t$)

5.5 Variation in the reliability of system with the varying failure rates($\lambda_t$)

5.6 Variation in the reliability of the system with varying values of c.

5.7 Variation in the availability of the system for low values of failure rates and low, medium and high values of repair rates

5.8 Variation in the availability of the system for medium values of failure rates and low, medium and high values of repair rates

5.9 Variation in the availability of the system for high values of failure rates and low, medium and high values of repair rates
