ACKNOWLEDGEMENT

First of all, I express my heartiest gratitude to Prof. Labananda Choudhury, my supervisor, for his guidance and encouragements in my PhD research. I am grateful to him for providing me research opportunity under his guidance and teaching the basics of research methodology. He gave me full autonomy and encouragement to try different methods useful in my research.

I had to go through the most tumultuous phase of my life during the period of this project. Prof. Choudhury’s spirited inspiration helped me to keep patience. I will remember throughout my life those valuable moments that I shared with my supervisor exchanging our views. In many a holidays the drawing room of his residence used to be the venue of our discussions. I shall never forget the warm hospitality that we were always provided by his wife Mrs. Nabanita Choudhury in the course of hours long discussions.

Life is a cruel balance sheet of gain and loss. I have fathered a daughter in the initial stage of my research and lost my father Dr. Rabindra Nath Sarma and elder brother Anjan Sarma within a span two years in the midst of this project. Left as the lone surviving male member of the family, the onus was on me to keep the family intact. In the last year of this project, my mother suffered from critical cardiac ailments and had to go through major heart surgery and needed constant attention and care. In those days of grazing in the wilderness the memory of the teachings of my father and brother kept me going. Of course, I have learned the value of fighting against the odds in the hard way. In this study of mortality and fertility, mortality superseded fertility in my case.

My daughter Drona and niece Loya grew from infancy to childhood during this project. Now even they could ask me when I would become a Doctorate. I am grateful to them for not bothering me whenever I was engrossed in study. Hope I could compensate them for the playing hours that I missed by some means.

I am grateful to the internationally reputed statistician Prof. Parimal Mukhapadhaya for his suggestions in one of my chapters. Special thanks to Prof. S. Guha Roy and Prof. A. K. Saha of Indian Statistical Institute, Kolkata for providing me with their papers on infant mortality estimation.
One person to whom I would like to offer my sincere gratitude is Mr. Labu Sinha of NIIT, Maligaon, Guwahati. While I designed the data base software used to present the district life tables and the mortality and fertility measures, he developed the code of the software. We used to sit together for hours, I explain the theories and the logical part; he converts them into the code of C#. For someone not from mathematical or statistical background this could be an enormous task, but Mr. Singh perfectly understood my needs and delivered accordingly. Thanks again to Mr. Sinha.

I am grateful to Prof. H. K. Baruua, Prof. D. C. Nath, Prof. P. Sarma, Prof. K. K. Das, and particularly Dr. A. Choudhury and Dr. D. Bhattacharjee of the Dept. of Statistics, Gauhati University for their help and support that I got at different times.

I would like to acknowledge the role of my departmental colleagues Dr. P. Kalita, Dr. R. Begum, Dr. A. D. Nath, Dr. B. R. Powdel and Miss J. Gogoi in Darrang College, Tezpur. It was due to their constant inspiration that finally I came out for research work and could finish the thesis.

I got a lot of support and inputs from my fellow research scholars in the Department of Statistics, G. U. Mr. Prasanta Barman, Mr. N. Bishwas, and Mr. N. Islam needs special mention.

I would like to acknowledge Dr. J. Hazarika, Principal, Darrang College, Tezpur for his help and support towards my research work. I got a lot of encouragement, support and affection from all my fellow colleagues in Darrang College.

Next I am going to acknowledge a personality though I did not have any direct contact with him. He is Mr. R. C. Sethi, Additional Registrar General of Census. He was kind enough to send many of the data from his New Delhi Office that was not available in Guwahati when approached by my supervisor on behalf of me. Mr. Abani Bhagabati from the Office of the Director of Census Operation, Guwahati also deserves special thanks for his cooperation and help whenever I approached him seeking census data.

I would like to acknowledge Dr. S. Roy of UGC (NERO), Guwahati for granting me a Minor Research Project which covers a part of the study.
In joy or in grief, I am fortunate to have some persons always around me. One of them is my childhood friend Mr. Pranab Jyoti Borah. In days of crisis his presence eased my burdens not to speak of the hilarious upheavals he brought to me in the days of fortune. Another of my friends who deserves special acknowledgement is Mr. M. Raj from the department of Zoology of my college. I am grateful to him for his help in many aspects of my research.

In this hour of submitting my thesis I express my heartiest gratitude to my Statistics teachers in Cotton College and in Gauhati University. I feel the touch of their blessing hands at all important moments of my life.

I am mostly indebted to my wife Reejushmita. She put all efforts to relieve me from family matters and maintained the family single handed. It was her constant inspiration that I could finally complete the thesis. Without her active support it would not have been possible on my part to complete the job.

I feel one important person has not yet been acknowledged is my mother. It was her dream to see me doing research in an important field. It brings me peace and solace to see the satisfaction on her face when I was busy with computer and research papers. It makes me enthusiastic as it used to happen in my childhood.

I also acknowledge the support I got from my sister in law Chandamita. In those days of family tragedy, despite losing her husband untimely, she always stood by me in the moments of crisis.

I feel proud of being a PhD student of this University which, over the decades, is producing many a great scholars. Its quest for enlightening the banks of the mighty Brahmaputra makes me applaud with hopes that in near future not only the state of Assam but the entire unprivileged North East of India will be able to experience rapid social and economic development.

Rajan Sarma
