FUTURE SCOPE

Although the EDM machining has been thoroughly investigated for aluminium metal matrix composites and metal matrix nano composites still there is a scope for further investigation. The following suggestions may prove useful for future work.

- The effects of machining parameters such as recast layer thickness and diametral over cut should be investigated.

- Efforts should be made to investigate the effects of EDM process in a cryogenic cutting condition.

- Efforts should be made to investigate the effects of EDM process on machining of hybrid metal matrix composites.
