List of Tables	xxvii
-----------------------	--------------

1 Introduction	1
1.1 Standard Model of Particle Physics	2
1.2 Fundamental Interactions	6
1.3 Diboson Processes at the LHC	13
1.4 Double-Parton Scattering	15
1.5 Thesis Organization	21
Bibliography	23
2 Experimental setup	29
2.1 The Large Hadron Collider	29
2.1.1 Luminosity and Pileup	32
2.1.2 The LHC Operation Periods	34
2.2 The Compact Muon Solenoid Detector	35
2.2.1 CMS Coordinate Conventions	38
2.2.2 Superconducting Solenoid	39

2.2.3	Tracking System	39
2.2.4	Calorimeters	41
2.2.4.1	Electromagnetic Calorimeter	43
2.2.4.2	Hadron Calorimeter	45
2.2.5	Forward Calorimeter	47
2.2.6	Muon System	49
2.3	CMS Trigger and Data Acquisition System	51
2.4	Event Simulation	53
2.4.1	Hard Scattering	55
2.4.2	Parton Showering and Hadronization	56
2.4.3	Description of MC Event Generators	57
2.5	Detector Simulation	58
2.6	Software Framework	59
2.7	Conclusions	59
	Bibliography	61
3	CMS muon detector system upgrade	67
3.1	The CMS RE4 Upgrade	68
3.2	Resistive Plate Chambers	71
3.2.1	RPC Detector Operation	72
3.2.2	RPC Gas Mixture	74
3.3	RPCs for the CMS RE4 Upgrade	75
3.4	Assembly and Characterization of RPCs	79
3.4.1	Characterization of Gas Gaps	79
3.4.1.1	Mechanical Tests of Gas Gaps	79
3.4.1.2	Electrical Tests of Gas Gaps	81

3.4.2	Assembly of RPCs	84
3.4.3	Characterization of RPCs	84
3.5	Performance Evaluation of RPCs in the CMS Experiment	89
3.5.1	RPC Active Channels	90
3.5.2	RPC Working Point Calibration	92
3.5.3	Cluster Size	93
3.5.4	Background Levels	94
3.5.5	Detection Efficiency	98
3.6	Conclusions	100
	Bibliography	101
4	Event reconstruction	105
4.1	Track and Vertex Reconstruction	107
4.2	Particle-Flow Reconstruction Technique	111
4.3	Muons	112
4.4	Electrons	114
4.5	Lepton Isolation Variable	116
4.6	Jets Reconstruction	117
4.6.1	Jet Clustering	118
4.6.2	Tagging b jets	120
4.7	Missing Transverse Energy	121
4.8	Conclusions	122
	Bibliography	123
5	Study of DPS processes using same-sign WW events	127
5.1	Signal Processes	128

5.2	Background Processes	130
5.2.1	Top Quark Processes ($t\bar{t}$ Pairs and Single Top Quark Production)	130
5.2.2	W+jets and QCD Multijet Processes (Jet Induced Backgrounds)	132
5.2.3	$Z\gamma^* \rightarrow l^+l^-$ +jets (DY) Process	133
5.2.4	Diboson Processes (WZ/ZZ/ $W\gamma^{(*)}$ / $Z\gamma$)	134
5.3	Analysis Strategy	134
5.4	Data and Simulation Samples	136
5.5	Trigger Selection	138
5.6	Event Selection Criteria	139
5.7	Background Estimation Techniques	142
5.7.1	Jet Induced Background Processes	143
5.7.1.1	Application of Lepton Misidentification Rates and Prompt Ratios	148
5.7.1.2	Closure Test and Systematic Uncertainty	149
5.7.2	Background Events from Charge Misidentification of Electrons	150
5.7.3	Background Events from $W\gamma$ and $W\gamma^*$ Processes	150
5.8	Systematic Uncertainties	152
5.9	Data-MC Validation	155
5.10	Multivariate Analysis	159
5.10.1	Training and Testing of BDTs	159
5.11	Limit Setting	162
5.12	Conclusions	167
	Bibliography	168

6 Measurement of production cross section for WW via DPS and effective cross section parameter	171
6.1 Signal and Background Processes	171
6.2 Event Selection	172
6.3 Background Estimation Techniques	174
6.4 Systematic Uncertainties	177
6.5 Data-MC Validation	180
6.6 Multivariate Analysis	180
6.7 Combined Analysis	186
6.8 Conclusions	191
Bibliography	193
7 Summary	195
7.1 Assembly and Characterization of RPCs	196
7.2 Study of DPS Processes Using Same-Sign WW Events	198
7.3 Outlook	200
List of publications	203
Selected reprints	247
