ACKNOWLEDGEMENT

First of all, in all my sincerity, I would like to thank my most respected teacher and guide Prof. V. Subramanian for giving me the opportunity to work with him. It was because of his encouragement and able guidance that I got motivated to work in such a far away place like Chennai for my M.Sc. project and in Vembanad Lake, Kerala for my M.Phil. dissertation and again the same encouragement motivated me to work in a difficult terrain like Goa and Karnataka for my Ph.D. thesis. It has been immensely exciting and learning experience working with him. I would also like to thank him for being so demanding about the work, which always kept me on feet and because of him only this thesis has taken this shape well in time.

I would also like to take this opportunity to thank Dean, School of Environmental Sciences, JNU for providing excellent research facilities in the school. Along with him all his office staff have been extremely cooperative and considerate. I also owe thanks to University Grant Commission for giving uninterrupted financial assistance in form of fellowship, which kept up the momentum of the research.

Among seniors of my laboratory, I would like to acknowledge the help I received from Dr. A.L. Ramanathan of SES and Prof. R. Ramesh of Anna University, Chennai. I also owe thanks to Dr. Pramod Singh, an ex-student of SES and Mr. Balachandran of SES for their selfless help during my analysis.

Bundle of thanks are due to all my labmates - Abhay, Annadurai, C. Chatterjee, Charles, D.S. Chatterjee, Dheeraj, Gautam, Madhavan, Manju, Manoj, Satyendra, Selvan and Suranjit. They provided ideal atmosphere of research and were always there to help me out whenever I had any problem. I owe special thanks to C. Chatterjee for helping me during my sampling and I would also like to thank his wife and kid Tito for making my evenings refreshing during my sampling trip to Goa and Karnataka. I t will be unfair if I forget Mohammad, the driver of the vehicle hired for sampling, and Staff of Karnataka Tourism Corporation who provided the boats for sampling in such a hostile Kali estuary. Their help is invaluable for this work.
Away from my lab, my friends Theso, Sarita, Dipti, Madhumita made my leisure a perfect leisure and stood behind me in my thick and thin. Their company was just a fun, which rejuvenated me to take up the next day's work. I thank them all for everything they have done for me.

The dream of completing this thesis would not have realized if my father, mother, sister Mary and brother Anurag would not have been there, standing firmly behind all my decisions. I also owe thanks to my in-laws, especially Ma and Babuji for giving me love and affection, which was required to keep me going.

I would also like to thank my husband, Sujit, for his support and help at all stages of this work, without which this work would have not been possible. I also thank him for his understanding towards the responsibilities I had during the course of the work.
