ACKNOWLEDGEMENTS

It is always difficult to find out the correct words to thank the right person. This thesis is the end of my long journey in obtaining my degree in Environmental Science. I have not travelled in a vacuum in this journey. There are some people who made this journey easier with words of encouragement and more intellectually satisfying my inquisitive mind to expand theories and ideas. I wish to thank all those who spent time with me during my doctoral thesis, either discussing problems regarding experimental work or personal problems. I wish to thank those people for a wonderful time both at University of Kalyani and University of Calcutta.

My warmest thanks go to my supervisor Dr. Arindam Bhattacharyya. He gave me the opportunity, confidence and support to begin my doctoral program in ENVS. Dr. Bhattacharyya challenged me to set my benchmark even higher. His friend-full behaviour and open-lab environment learned me to believe in my future, my work and me. I am grateful to his excellent guidance on my thesis work as well as the freedom he gave me to explore myself. These years have been mind-blowing. The way, Sir you have guided me along my path to become a young scientist has been so immense and educative. Your determination and persistence in this complicated field deserve the utmost respect and admiration. Besides scientific issues, I wish to thank him for all of those friendly behaviours, made my life easier and warmer in two of my working places. I also owe my deepest gratitude to my mentor for sharing time with me and supported immensely both mentally and practically. Without his unbelievable enthusiasm and ability to keep up high spirits even during scientifically less productive periods, I might not have completed this work. Thank you Sir.

I am most grateful to my other supervisor Dr. Soma Mukherjee for her guidance during course work preparation; she helped me a lot to understand the chemistry of cadmium related compounds throughout my tenure. I am also indebted due to her critical evaluation of my work. I deeply admire her knowledge and passionate attitude towards science.

These studies were carried out in two phases and in two different places. From 2006 to 2009 and half it was a journey through Department of Environmental
Science, University of Kalyani, and rest of the year I spent in Department of Zoology, University of Calcutta. I want to thank Dr. Rina Bhattacharya, Prof. S.C. Santra, Dr. D.K. Khan, Dr. Debasish Das of ENVS, Kalyani, for not only giving me the opportunity to work in such an esteemed environment but also donating their valuable suggestions during my research work.

I also wish to thank Prof. Sumit Homechaudhury, Dr. Ena Roy Benerjee, Dr. Sagartirtha Sarker, Dr. Urmi Chatterjee, Prof. Samir Banerjee of Dept. of Zoology, Calcutta, they always stretched their helping hands whenever I needed.

There are no superlatives that could describe my appreciation to Suman. From the very beginning Suman was always with me in every moment and every time. The periods were full of struggle when we all tried to set up our new lab. But the work was never felt hard because we all cumulatively shared everything between us. The companionship, during the late evening and nights while working in laboratory or during discussing anything has also been of great value. I understood how indispensable it is to have someone like Suman to share the problems, frustration as well as rewarding moments with.

I am honoured to have had the privilege to co-operate with my brothers, my juniors Soham, Tarun, Soumya, Santanu Samir and Subir, Sourjya, Samiran, those who were very much enthusiastic in attitude towards helping others. I warmly thank all of them. I wish to express my sincere affection to my labmates for inspiring scientific discussion on the excising functions of cancer biology and fruitful ideas on how to conduct studies.

Friends and colleagues of Research Scholar hostel, and the entire personnel of University of Kalyani are thanked for vivid working environment. The lab has often felt my second home and for this thanks are due to you people, from whom the plain unvarnished truth could be heard, with whom I could cry and laugh and who willingly to shared the good and bad feelings in both the scientific and non-scientific fields. In terms of research, special thanks and big hugs are owed to Utpal, Biswabandu, Ankur, Aniruddhay, Arijit, Uddalok, Debasish, Palash, Arka, Ritam, Arpan, Ananda, Gopi, Joyjit, Raktim, Suman, Santu, Barik those who belong to our research group.

I am privileged to have grown up in an environment which was filled with love and care of some great people like Prof. K.R Samaddar, Dr. Tarak Das Basu, Dr. Tapan Kumar Das, Dr. Tapas Kumar Bandapadhaya, Dr. Samir Kumar Mukherjee, Prof. Arun Roy, Dr. Sanjoy Ghosh, Dr. Palsh Kumar Mandal.

I devote my greatest thanks to my family, my Father and Mother, reared me up from my childhood and also to my very close friends Koushilc, Rita, Tanmoy, Sunil, my brother Arpan, they always pushed me from outside to reach my goal.

Last but not the least, acknowledgement also goes to Indian Council of Medical Research (ICMR), India, who extended the financial support for these studies.
