Preface

1 Preliminaries

1.1 Introduction

1.2 Some tools of nonlinear functional analysis

1.3 Variational inequalities, equilibrium problems and iterative methods

1.3.1 Variational inequalities

1.3.2 Systems of variational inequalities

1.3.3 Equilibrium problems

1.3.4 Iterative methods

2 Common solutions of variational inequality, system of variational inequalities, mixed equilibrium problem and fixed point problem for a pseudocontractive mapping

2.1 Introduction

2.2 Preliminaries

2.3 Iterative method

2.4 Consequences

3 Common solutions of split equilibrium problem and fixed point problem for a nonexpansive semigroup

ix
3.1 Introduction ................................................. 51
3.2 Preliminaries .............................................. 54
3.3 Implicit iterative method ................................. 55
3.4 Explicit iterative method ................................. 68
3.5 Consequences ............................................ 78
3.6 Numerical example ...................................... 81

4 Common solutions of split generalized equilibrium problem and fixed point problem for a nonexpansive semigroup 85
4.1 Introduction ............................................... 85
4.2 Preliminaries .............................................. 86
4.3 Iterative method ......................................... 88
4.4 Consequences ............................................ 98

5 Common solutions of split equilibrium problem, variational inequality problem and fixed point problem for a nonexpansive mapping 101
5.1 Introduction ............................................... 101
5.2 Iterative method ......................................... 101
5.3 Consequences ............................................ 110

6 Common solutions of split variational inclusion problem and fixed point problem for a nonexpansive mapping 113
6.1 Introduction ............................................... 113
6.2 Implicit iterative method ................................. 115
6.3 Explicit iterative method ................................. 122
6.4 Consequences ............................................ 127

7 Common solutions of system of unrelated mixed equilibrium problems and common fixed point problems for a family of nonexpansive mappings 129
7.1 Introduction ............................................... 129
7.2 Preliminaries ............................................ 131
7.3 Hybrid-extragradient-convex approximation method ............................. 131
7.4 Consequences ...................................................................................... 140

8 Generalized mixed equilibrium problems .............................................. 143
  8.1 Introduction .......................................................................................... 143
  8.2 Existence of solution of auxiliary problem ........................................... 145
  8.3 Resolvent projection method ................................................................. 149
  8.4 Implicit iterative method ..................................................................... 153
  8.5 Resolvent equation and extragradint-like iterative method ................. 159
  8.6 Consequences ...................................................................................... 163

Bibliography .............................................................................................. 166
