ACKNOWLEDGEMENT

I take the opportunity to express my deep sense of gratitude to Dr. Paritosh Bhattacharyya, retired Professor of Department of Mathematics, University of Kalyani to induct me as a Research Scholar under his guidance. Down the memory lane of my classes in the P.G course in Topology by Prof. Bhattacharyya, I was enchanted with his vast erudition, exquisite artful teaching and the ability of wandering through the deep intricacies of the subject. Since then I fantasised my future objective to do research under Dr. Bhattacharyya. The vastness of the subject was so impregnated by him. I often wandered into the realm of different facets and the intrinsic values of the subject. The present endeavour is the outcome of my roaming habit imbibed in me by Prof. Bhattacharyya. Here in this thesis I have made an humble effort to explore different aspects of General topology with new vision. This effort has finally been accomplished by the continuous guidance, constant care, encouragement of Prof. Bhattacharyya in the form of this thesis.

Sincere thanks are accorded to Smt. Alaka Bhattacharyya for her looking after me with motherly affection.

I acknowledge from my heart of hearts all my indebtedness to my “Alma Mater”, the University of Kalyani from which I have got the opportunity to carry my
research work. I am also thankful to all my teachers of the Department of Mathematics, University of Kalyani for their constant interest and encouragement in my research work.

Finally, I shall be failing in my duty if I don't acknowledge the indebtedness to my parents, aunts and other family members who stood by my side constantly and encouraged me patiently at times when nothing seemed to go right.
