ACKNOWLEDGEMENTS

I shall remain indebted to all those who have aided me in the speedy completion of this work.

Dr. Raj Raghupathy has been more than just a supervisor. His inspiring guidance, constant motivation and continued support have helped me cross many a hurdle with ease. He has taught me to approach scientific problems judiciously. His friendly and understanding nature has made working in the lab a pleasure. I have also gained "public speaking" and writing skills under his tutelage. I wish to express too, my heartfelt thanks for the speed with which he has corrected my thesis.

As my co-supervisor, Prof. B.P. Talwar has been source of valuable suggestions and timely encouragement. His pragmatic approach to science and his astuteness in coming forth with new ideas has often amazed me. I am fortunate at having had the opportunity to benefit from my association with him.

A major portion of this work could not have been carried out but for the help rendered by Arunam. Besides allowing me free access to the Immunochemistry Lab, he afforded valuable suggestions at critical junctures.

My thanks are due to Dr. Sinakar Salunkhe, Dr. Kanury Rao and Dr. Manivel for help with biochemical characterization of the suppressive factor. I greatly appreciate the excellent animal facility provided by Dr. Rajesh Anand. I would like to thank members of my Doctoral committee Dr. Om Singh, Dr. Vinata Bat, and Dr. Rahul Pat for having provided valuable suggestions. Special thanks are due to Dr. Satyajit Path for helpful discussions.

Working in the Immunogenetics Lab has been a wonderful experience for me. Shabnam, Shyama, Yato, Shubhendua, Anil, Priya and Biri have all provided an amicable working atmosphere. I shall continue to recall with nostalgia the stimulating scientific discussions, the heated debates on topics of interest and "chai" interludes that we enjoyed so often. During these past few months, writing this thesis often seemed such an insurmountable ordeal that I was glad that I had Shabnam to turn for consolation and
consultation. Priya and Bini have offered technical assistance several times and made my tasks so much more easier. Saying just a formal thanks to Shyama makes seem insignificant all the help that he has rendered. He has borne the brunt of my short-temper several times. Without Shyama to fall back on at times of crisis, I may never have enjoyed my days at the 3D lab. I shall always cherish the memories of my moments with all members of the 3DCF.

Yasmin has gone out of his way to help me out on several occasions. I particularly want to acknowledge his having left behind his laptop computer for my use. I am touched by this gesture.

My sincere appreciation for Dr. Amitabh Mukhopadhay for allowing use of his laser printer.

My thanks are due to Babulal and all other library staff of the institute.

Subash has been in many ways instrumental in the speedy completion of this work. He has always been a source of constant reassurance and encouragement. Suffice it to say, he has been here whenever I needed him.

I have no words to express my gratitude to my parents. They have been primarily responsible for encouraging me to take up a research career. Without their support and understanding I may have never reached so far. Amma and Appa thank you for everything.

I gratefully acknowledge the financial support afforded by the National Institute of Immunology.
