ACKNOWLEDGEMENTS

This thesis is going to be the end of my long journey in obtaining my doctoral degree in Chemistry. Over the past years I haven’t traveled in void but was privileged enough to come close to some people who made my doctoral expedition look easier with words of encouragement and more intellectually satisfying by offering different places to look to expand my theories and ideas. Today I have to write perhaps the easiest and hardest chapter of my dissertation. It will be simple to name all the priceless people who helped to get this done, but it will be tough to thank them enough. I will nonetheless have a try...

In the foremost place I would like to show my deepest gratitude to my research supervisor Prof Mitali Sarkar. Department of Chemistry, University of Kalyani. Professor Sarkar gave me the confidence and support to begin my PhD program in Analytical Chemistry. Her invaluable advices and guidance from the very early stages made my research work “feel good” little by little. Her wide knowledge and her logical way of thinking along with a truly scientist intuition has made her as a constant oasis of ideas and passions in science, which exceptionally inspired and enriched my growth as a student, a researcher and a scientist want to be. Prof Sarkar challenged me to set my benchmark even higher and to look for solutions to problems rather than focus on the problem. I learned to believe in my future my work and myself. I am indebted to her more than she knows. Thank you Madam.

I would like to express my warm and sincere gratefulness to the respected Head and all my revered and beloved teachers of the Chemistry Department for bestowing their generous help and support upon me whenever I needed. I also express my kind thanks to all the dear members of the non-teaching faculty of Chemistry Department. Arnabda and Sunilda deserve to be mentioned specially.

I feel highly honoured to show my deep appreciation to Dr H. S. Maiti, Director, Central Glass and Ceramic Research Institute (CGCRI), Kolkata who was kind enough to grant me permission to exploit some seminal instrumental facilities of the institute which immensely boosted my research work. I also express my heartfelt thanks to Dr Suchitra Sen, Dy Director and Head, SEM/ESCA Division, CGCRI, Kolkata for helping me a lot with the SEM analysis of my product samples.

I would also like to acknowledge the kind affection and support of Mr Sachchidananda Chakraborty, Retd Dy Director, CGCRI, Kolkata and Hony Secretary, Indian Ceramic Society, Kolkata. Our Secretary Sir was so sympathetic that he allowed me office leave whenever I needed them to attend my research laboratory. I also sincerely appreciate the enormous enthusiasm and support of all my colleagues of Indian Ceramic Society and Indian Institute of Ceramics, Kolkata. It is a real joy for me to have such friendly and caring office colleagues at work.
It is also a matter of immense delight for me to admire all my past and present lab colleagues. I indeed had a great destiny which blessed me with some wonderful people who were rather much less than mere co-workers and more of “good friends”. I can never fail to remember those precious moments of long and constructive “addas” that we sometimes had during our lengthy and strenuous hours of experimentation in the laboratory. They are a part and parcel of every detail of my research work. All the folks created a stimulating and fun environment which inspired me to learn and grow.

I would also like to thank all my dear friends and sisters of Research Scholars’ Hall (Women). University of Kalyani where I have spent a crucial phase of my research life. I feel really indebted to them for imparting upon me that kind of generosity and respect which I barely deserved.

Life without friends is just food without salt! – absolutely bland. But mine was not! From my early MSc years in the University of Kalyani, I came closer with a few classmates who with time turned out to be either my lab-mates or room-mates but above all my most adorable friends till date. Dr Aparna Banerjee was with me everywhere, be it the classroom, research laboratory or room. Later when she married one of my dear classmates Dr Saikat Sarkar, they let me share their apartment whenever I needed to stay for work. Aparna and Saikat have really taught me that there is some other religion above work, perhaps called humanity. Dr Soma Bhattacharyya was my classmate, room-mate and a very chubby little sweet friend as well. She helped me a great deal with graphical plots and providing excellent suggestions during my work.

Finally it is the turn to remember my roots – my family. I owe my everything to them. My parents didn’t have a great scientific background but what they have is sheer respect for knowledge and an immense belief in me. They have helped me in every possible way so that I can complete my thesis work. They had not only put the fundament my learning character, showing me the joy of intellectual pursuit ever since I was a child, but also sincerely raised me with their caring and gentle love. Jhulan and Jhoton, the couple of my naughty but lovable siblings made life as beautiful ever for me. But how can I forget my mother-in-law? She is indeed like my own mother and has encouraged me more than just anyone throughout my research career. She has never urged me to sacrifice my work for mere family commitments. On the contrary she always tried to heighen my confidence in work. What a great “Sasuri Maa” you are!!

Last but not the least let me say that Dr Arindam Chakraborty, my classmate, less a husband and more than a friend with whom I am around for the past decade always used to cheer me up by saying – “forget everything and just hurry up”. He relies more on performance than the outcome. I know that he is now a very happy man as I am going to fulfill one of his long cherished dreams, a “Dr” title beside my name. What else to say for Arindam. I have no words or phrases to express his dedication to me!
