CHAPTER - 5
CONCLUSIONS, LIMITATIONS AND SUGGESTIONS FOR THE FUTURE STUDY

5.1 INTRODUCTION:

The main objective of the present study is “Death Anxiety and Psychological well-being among cancer patients”. The sample of the present study was selected randomly from Different cancer hospitals. The sample of the present study was divided by their Gender like Male and female, Cancer stage like Initial stage and Last stage, and Age group like Up to 50 years and More than 50 years.

Death Anxiety scale and Psychological well-being Scale were given to the cancer patients. Each form was taken back. The forms with incomplete details were cancelled. The marks were counted ‘F’ test is applied to know the difference between the Death Anxiety and Psychological well-being of Cancer patients. The conclusions derived are as under.

5.2 CONCLUSIONS OF THE STUDY:

(1) There is no significant difference between the score of Death Anxiety among Cancer patients in relation to Gender.

(2) There is no significant difference between the score of Death Anxiety among Cancer patients in relation to Cancer Stages.

(3) There is a significant difference between the score of Death Anxiety among Cancer patients in relation to Age group.

(4) There is no significant difference between the score of Death Anxiety among Cancer patients in relation to Gender and Cancer Stages.

(5) There is no significant difference between the score of Death Anxiety among Cancer patients in relation to Gender and Age group.
(6) There is no significant difference between the score of Death Anxiety among Cancer patients in relation to Cancer Stages and Age group.

(7) There is no significant difference between the score of Death Anxiety among Cancer patients in relation to Gender, Cancer Stages and Age group.

(8) There is no significant difference between the score of Satisfaction among Cancer patients in relation to Gender.

(9) There is a significant difference between the score of Satisfaction among Cancer patients in relation to Cancer Stages.

(10) There is no significant difference between the score of Satisfaction among Cancer patients in relation to Age group.

(11) There is no significant difference between the score of Satisfaction among Cancer patients in relation to Gender and Cancer Stages.

(12) There is a significant difference between the score of Satisfaction among Cancer patients in relation to Gender and Age group.

(13) There is a significant difference between the score of Satisfaction among Cancer patients in relation to Cancer Stages and Age group.

(14) There is a significant difference between the score of Satisfaction among Cancer patients in relation to Gender, Cancer Stages and Age group.

(15) There is no significant difference between the score of Efficiency among Cancer patients in relation to Gender.

(16) There is a significant difference between the score of Efficiency among Cancer patients in relation to Cancer Stages.

(17) There is no significant difference between the score of Efficiency among Cancer patients in relation to Age group.

(18) There is no significant difference between the score of Efficiency among Cancer patients in relation to Gender and Cancer Stages.

(19) There is no significant difference between the score of Efficiency among Cancer patients in relation to Gender and Age group.
There is a significant difference between the score of Efficiency among Cancer patients in relation to Cancer Stages and Age group.

There is no significant difference between the score of Efficiency among Cancer patients in relation to Gender, Cancer Stages and Age group.

There is a significant difference between the score of Sociability among Cancer patients in relation to Gender.

There is a significant difference between the score of Sociability among Cancer patients in relation to Cancer Stages.

There is a significant difference between the score of Sociability among Cancer patients in relation to Age group.

There is no significant difference between the score of Sociability among Cancer patients in relation to Gender and Cancer Stages.

There is a significant difference between the score of Sociability among Cancer patients in relation to Gender and Age group.

There is a significant difference between the score of Sociability among Cancer patients in relation to Cancer Stages and Age group.

There is no significant difference between the score of Sociability among Cancer patients in relation to Gender, Cancer Stages and Age group.

There is a significant difference between the score of Mental Health among Cancer patients in relation to Gender.

There is a significant difference between the score of Mental Health among Cancer patients in relation to Cancer Stages.

There is a significant difference between the score of Mental Health among Cancer patients in relation to Age group.

There is a significant difference between the score of Mental Health among Cancer patients in relation to Gender and Cancer Stages.

There is no significant difference between the score of Mental Health among Cancer patients in relation to Gender and Age group.
(34) There is a significant difference between the score of Mental Health among Cancer patients in relation to Cancer Stages and Age group.

(35) There is no significant difference between the score of Mental Health among Cancer patients in relation to Gender, Cancer Stages and Age group.

(36) There is no significant difference between the score of Interpersonal Relations among Cancer patients in relation to Gender.

(37) There is no significant difference between the score of Interpersonal Relations among Cancer patients in relation to Cancer Stages.

(38) There is no significant difference between the score of Interpersonal Relations among Cancer patients in relation to Age group.

(39) There is a significant difference between the score of Interpersonal Relations among Cancer patients in relation to Gender and Cancer Stages.

(40) There is no significant difference between the score of Interpersonal Relations among Cancer patients in relation to Gender and Age group.

(41) There is a significant difference between the score of Interpersonal Relations among Cancer patients in relation to Cancer Stages and Age group.

(42) There is no significant difference between the score of Interpersonal Relations among Cancer patients in relation to Gender, Cancer Stages and Age group.

(43) There is no difference in correlation score between the Death Anxiety and Satisfaction among Cancer patients in relation to Gender, Cancer Stages and Age group.

(44) There is a difference in correlation score between the Death Anxiety and Efficiency among Cancer patients in relation to Gender, Cancer Stages and Age group.
(45) There is a difference in correlation score between the Death Anxiety and Sociability among Cancer patients in relation to Gender, Cancer Stages and Age group.

(46) There is no difference in correlation score between the Death Anxiety and Mental Health among Cancer patients in relation to Gender, Cancer Stages and Age group.

(47) There is no difference in correlation score between the Death Anxiety and Interpersonal relations among Cancer patients in relation to Gender, Cancer Stages and Age group.

(48) There is no difference in correlation score between the Satisfaction and Efficiency among Cancer patients in relation to Gender, Cancer Stages and Age group.

(49) There is no difference in correlation score between the Satisfaction and Sociability among Cancer patients in relation to Gender, Cancer Stages and Age group.

(50) There is no difference in correlation score between the Satisfaction and Mental Health among Cancer patients in relation to Gender, Cancer Stages and Age group.

(51) There is a difference in correlation score between the Satisfaction and Interpersonal relations among Cancer patients in relation to Gender, Cancer Stages and Age group.

(52) There is a difference in correlation score between the Efficiency and Sociability among Cancer patients in relation to Gender, Cancer Stages and Age group.

(53) There is no difference in correlation score between the Efficiency and Mental Health among Cancer patients in relation to Gender, Cancer Stages and Age group.
There is no difference in correlation score between the Efficiency and Interpersonal relations among Cancer patients in relation to Gender, Cancer Stages and Age group.

There is a difference in correlation score between the Sociability and Mental Health among Cancer patients in relation to Gender, Cancer Stages and Age group.

There is a difference in correlation score between the Sociability and Interpersonal relations among Cancer patients in relation to Gender, Cancer Stages and Age group.

There is no difference in correlation score between the Mental Health and Interpersonal relations among Cancer patients in relation to Gender, Cancer Stages and Age group.

5.3 LIMITATIONS:

Researcher keeps in mind only certain variable various aspects affect Death Anxiety and Psychological Well-being. Only specific factors are considered in this study. There are some limitations of this study which are as follow.

(1) In the present study the Cancer Patients of Gujarat State, especially Males and Females Cancer Patients are considered. Their result cannot be applied to the Cancer Patients of other States.

(2) In the present study only Cancer Patients are included. The conclusions are not applicable to the patients suffering from other Diseases.

(3) The present study is conducted regarding the gender, Cancer stages and Age groups.

(4) Present research was conducted with limited Samples.

(5) Only the people of Gujarat origin are included in this study.

(6) The results of Initial stage of Cancer Patients and the results of Last stage of Cancer Patients are not applicable to each other.
(7) The results of Up to 50 Years Cancer Patients and the results of More than 50 Years Cancer Patients are not applicable to each other.

(8) Results of female Cancer Patients and the results of male Cancer Patients are not applicable to each other.

(9) This research provides guidance in educational programme but on its basis principle cannot be formulated.

5.4 SUGGESTIONS FOR THE FUTURE STUDY:

(1) In the present study only Cancer Patients are included. If other patients suffering from other Diseases had been included, then comparative study could have been possible to see the effect.

(2) In the present study the Cancer Patients only Gujarat State has been included. For wider research demonstration could have been selected from the whole India or other various States.

(3) Only Cancer Patients have been included in the present study. For comparative study other variable should have been included.

(4) Conclusion could have been more reliable and proper by expanding the scope of research.

(5) Research can be performed by considering factors like caste, religion, blind faith, superstitions, physical fitness, economic matters etc. These factors are all related to Death Anxiety and Psychological Well-being.

(6) Research can be made more reliable by applying statistically more developed analytical methods.

5.5 IMPORTANCE OF THE RESEARCH:

(1) Present research is useful to know the effect of Death Anxiety and Psychological Well-being.

(2) Present research imparts information regarding various individual difficulties of Cancer Patients, social problems, physical problems and economic problems and how they affect his life.
(3) This research is useful in removing Cancer Patients’ problems and what can be done for their social and physical security and how to increase their Death Anxiety and Psychological Well-being.

(4) This research is useful for the students working on Death Anxiety and Psychological Well-being.

(5) This research is useful to the students as well as to those who are working in counseling field.

(6) For the help of this study Cancer Patients come to know about their Death Anxiety and Psychological Well-being.

(7) The objective of the present research is regarding Death Anxiety and Psychological Well-being. Maximum available information is presented. This is a humble attempt to measure the level of Death Anxiety and Psychological Well-being of the Cancer Patients. This research has its own achievements and faults. It has its own strong and weak points. Keeping them all in view if interpreted accordingly it will be of great importance for society.

5.6 CONCLUSION:

The purpose of the present research was Death Anxiety and Psychological well-being of the cancer patients. During their life cancer patients have to face many problems and it is quite difficult to get adjusted to the situation. As a result their difficulties increase. They are disappointed and worried when they are not rewarded. Moreover they face many economic problems also. The level of frustration and worry increase day by day. They attempt to pass reaming time of their life with friends. They share their happy and sad feelings. They support one-another. As a result their tension and anxiety will decrease and they have opportunity to live better life. A person can enjoy happy life if Death Anxiety and Psychological well-being level is balanced. It decreases their problems. And they become a progressive individual.
