ACKNOWLEDGEMENTS

I am very grateful for my years at NBRC made possible by my friends and colleagues because of their steadfast support. I would like to thank a number of people for constantly encouraging me over the course of my dissertation.

Firstly, I would like to express my sincere gratitude to my advisor Prof Nandini C. Singh for consistently supporting my PhD research. Thanks for allowing me to endeavour in the field of music cognition. I would like to thank you for encouraging my research and for allowing me to grow as a research scientist. The constant motivation and guidance by you helped me all the time in research and writing of this thesis. Your advice on both research as well as in my career have been priceless. Thank you for providing me with quiet reassurance and a place to work when my anxiety was impeding me.

My doctoral committee members, Dr Saumya Iyengar, Dr P.K. Roy, and Dr Arpan Banerjee, for their insightful comments and encouragement, but also for the hard question which incented me to widen my research from various perspectives.

Jitender and Rupsa from the technical department for conducting the imaging scans.

My fellow labmates and co-authors for the stimulating discussions, for the sleepless nights we were working together before deadlines, and for all the fun we have had in the lab. Suhas for designing and making the website without which data collection would not have been possible on such a large scale. Vishal for insight and critique into data analysis. In particular, I am grateful to Dr Chaitra Rao for enlightening me the first glance of research.

GIAMBATTISTA VICO

Men vent great passions by breaking into a song, as we observe in the most grief stricken and the most joyful.

Music expresses that which cannot be said and on which it is impossible to be silent.

VICTOR HUGO
My labmates Jacob, Rashi, Hyma, Kshipra, Arko, Sarika and Sumathi for constant encouragement, discussions and fun over tea breaks.

Pandit Mukesh Sharma who composed and played the ragas to be used in the survey.

To all the participants from across the world who voluntarily participated in the study because of their love and enthusiasm for music.

Funding: This work was supported by funding from the National Brain Research Centre.

Thank you

Avantika Mathur
This thesis is dedicated to my brother, Arjun who has a rare neurological disorder, Sturge Weber Syndrome (SWS). His interest, capability to understand and respond to music made me question the ability of music to influence emotions and cognition. A big thank you to my parents who gently offer counsel and unconditional support at each turn of the road and whose foresight and values have paved the way for a privileged education. Thank you for helping me become the person I now am and the person I strive to be.

Thanks to late Vasav Arora for being a friend, philosopher and guide. This journey would not have been complete without your constant efforts in being with me and making me believe in myself. It was your enthusiasm, way of questioning scientifically and the ability to handle difficult experiments that provided me constant inspiration. May we meet again.
