## Contents

1 Introduction .......................................................... 1
   1.1 Motivation ......................................................... 1
   1.2 Organic Molecular Semiconductor (OMS) ......................... 3
   1.3 Two Important Organic Molecular Semiconductors ................. 6
       1.3.1 Why MePc based OMS is chosen for investigating the charge carrier
              conduction mechanism in disordered molecular solids? ............. 7
       1.3.2 Electric Field Dependent Mobility (Poole-Frenkle Effect) ......... 8
   1.4 Experimental Methods ........................................... 9
   1.5 Problems Investigated ........................................... 10
   1.6 Organization of Chapters ....................................... 10

2 Growth and Characterization of Organic Thin Film Devices .......... 13
   2.1 Introduction ..................................................... 13
   2.2 Growth of Organic Molecular Thin Film for Optical and Morphological Char-
       acterization ...................................................... 14
   2.3 Device Fabrication and Electrical Characterization .............. 15
   2.4 Optical Characterization ........................................ 16
       2.4.1 Molecular Electronic States ................................ 16
       2.4.2 Electronic Transitions in Optical Absorption Process .......... 18
       2.4.3 Processes Involved in Photoluminescence .................... 20
2.5 Morphological Characterization ........................................ 22
   2.5.1 Optical characterization of MePc Thin Films ................... 23
   2.5.2 AFM Characterization of MePc Thin Films ..................... 25
2.6 Characterization of Alq3 Thin Films ................................ 27
   2.6.1 Optical Characterization of Alq3 .............................. 27
2.7 Effect of High-Energy Irradiation on Optical Transitions in Alq3 Thin Films ........................................ 28
   2.7.1 High Energy Ion Irradiation on Alq3 Thin Films .............. 29
   2.7.2 Effects of Irradiation on Alq3 ................................. 30
2.8 Summary ....................................................................... 32

3 Current Injection Mechanism in Organic Molecular Semiconductor 33
   3.1 Introduction .................................................................. 33
   3.2 Fabrication of Single Layer Device based on OMS ............... 35
   3.3 Validity of Vacuum Level Alignment in OMS ...................... 35
   3.4 Diode Like Asymmetric J-V Characteristics in ITO/MePc/Al Structures ........................................ 38
   3.5 Dependence of Diode Characteristics on Different Parameters 41
   3.6 Different Current Injection Processes ............................. 43
      3.6.1 Fowler-Northeim Tunneling (FNT) .............................. 43
      3.6.2 Rechardson-Shottkey (RS) Emission Model .................. 44
   3.7 Charge Carrier Injection in Metal/OMS/Metal Structures ........ 44
   3.8 Schottky Energy Barrier and Charge Injection .................. 47
   3.9 Summary .................................................................... 52
4 Role of Correlation on Charge Carrier Transport in Organic Molecular Semiconductors

4.1 Introduction .................................................. 54
4.2 Experimental Details ......................................... 55
4.3 Current Transport in OMS ...................................... 56
  4.3.1 Failure of SCLC and TCLC Conduction Mechanisms in OMS. .... 58
  4.3.2 Hopping Conduction Mechanism and Electric Field Dependence of Resistivity ........................................ 59
  4.3.3 Simulation of Bulk Current with Field Dependent Mobility .... 62
4.4 Proposed Models For Charge Carrier Transport through OMS .......... 64
  4.4.1 Gill's Phenomenological Model. ............................ 64
  4.4.2 Uncorrelated Gaussian Disorder Model(UGDM) ................ 66
  4.4.3 Correlated Gaussian Disorder Model(CGDM) .................. 67
4.5 Limitations of Uncorrelated Models ................................ 69
4.6 Importance of Correlation in Molecular Semiconductors ............... 70
4.7 summary .................................................... 72

5 Nature of Charge Carriers in Disordered Organic Molecular Semiconductors

5.1 Introduction .................................................. 73
5.2 Experimental Details ......................................... 75
5.3 Polaron Hopping in OMS ....................................... 76
5.4 summary .................................................... 81

6 Anomalous Behavior in Conductivity Copper Phthalocyanine Based Organic Molecular Semiconductors 82
