Acknowledgements

Words are fewer expressions are more. At this hour of ineffable joy over the completion of my thesis, I find myself awkwardly transfixed in finding words that would prudently convey my gratitude towards those who have helped me in completion of the work.

First, I extend my sincere and indispensable gratitude to my supervisor Professor Atiya Habeeb Kidwai for taking the pain to discuss every aspect of my research from its inception and giving me the freedom to express myself. Inspite of her personal problems and my physical absence, she has taken out time for this research with all her interest. I really fail to find words for her especially for the timely completion of the work.

I am deeply grateful to Prof. B. S. Butola for his critical appreciations and valuable enhancement in understanding the theoretical aspect of the theme. This work definitely would have had an inferior one had I not received help from Prof. P. M. Kulkarni, Dr. S. Sinha and other faculty member of the CSRD. The encouragement and constructive criticism courteously extended by all the faculty members of CSRD are gratefully acknowledged. I must be especially thankful to Prof. S. Raju, the Chairperson for helping me and easing out the administrative difficulties, we academicians are always afraid of.

The constructive efforts of other faculty members especially Dr. Mohan Rao and Dr. Rohan, during the work have been of immense help to this work. The completion of the work at this hour is definitely contributed by the help and support of my colleagues at BHU, who constantly kept a watch that I do not sleep over my PhD.

My sincere thanks are due to Dr. Vasishth, State Tuberculosis Officer, Delhi for permitting me to conduct the primary survey at the six selected hospitals. The remarkable support by the DOTS providers at the six hospitals and the Medical officers at these hospitals is praise worthy. I am highly obliged to the respondents who suppress their pain and uneasiness to answer the questions with smile.
I am greatly appreciative of the help provided to me at different Archives (National Archives, New Delhi; State Archives West Bengal, State Archives Karnataka) and National Library, Kolkata; National Medical Library, New Delhi; Libraries of National Tuberculosis Institute, Bangalore; Indian Public Health Association, Kolkata; Tuberculosis Association of India, New Delhi; and National Institute of Communicable Diseases, New Delhi.

I have indeed drawn heavily from the generosity of my friends at JNU without whose support this work would have had a remotely sensed PhD. I am especially thankful to Taruna for her unconditional support and for making my presence felt at JNU as and when need arose. I am highly appreciative of the help, company and moral support provided by my friends especially Garima, Neelanjana, Sreoshi, Shweta, Abhay, Mahesh, Udayveer, Vishal and Vijayee. Without their help it would have been a humdrum task. I express my thanks to Guddu and Tunni, for helping in my survey and procuring rare books.

The indomitable inspiration and blessings of my parents cannot be expressed in words; without their support this dream could not have been fulfilled. I cannot overlook the unceasing cooperation and affection of Bhaiyajee.

I express my sincere thanks to Bijay for helping me in preparation of bibliography and Mr. Varghese and Rajesh for their cooperation in computer aided cartographic work.

Last, but not the least I am grateful to the Riyoichi Sasakawa for the recognition I got from him and Nippon Foundation, Japan for this research.

I therefore humble myself in gratitude to thank you all for your selfless assistance.

Bikramaditya Kumar Choudhary
