ACKNOWLEDGEMENTS

Getting those two beautiful letters ‘Dr’ added to one’s name is a dream cherished by all teachers. Along the road that I have traversed for acquiring those two letters many individuals have helped and motivated me. It gives me immense pleasure to acknowledge with gratitude the efforts of all these individuals.

My guide Dr. N. Nagesha, Associate Professor & Chairman, Department of Studies in Industrial & Production Engineering, University BDT College of Engineering, Davangere, and I, have an unique relationship with each other not known to many. Both of us know that we have not allowed this relationship to come in the way of this research work. I am extremely thankful to my guide, first for having accepted me as his research student and second, for having so meticulously guided me in completing this research work. I sincerely hope that some of his virtues of honesty, sincerity and discipline have rubbed on to me as well during the course of this work.

I also place on record my gratitude to the Principal and Faculty of University BDT College of Engineering in general, and Department of Industrial & Production Engineering in particular, for all the co-operation and help extended to me during the course of my research work.

I profusely thank Dr. N. V. Raghavendra of National Institute of Engineering, Mysore, who was instrumental in my acquaintance with Dr. P. Balachandra, Principal Research Scientist at the Indian Institute of Science, Bangalore, who kick started my research work and has been a pillar of moral as well as technical support throughout my research work. Rightfully so, I have dedicated this research work to Dr. P. Balachandra.

I am also indebted to Dr. B. G. Sangameshwara, Principal, SJCE, Mysore, who encouraged me to take up this research work and constantly enquired about my progress towards improving my qualification.
This research work wouldn’t have been possible without the cooperation and encouragement of head of the department of Mechanical Engineering at SJCE, Mysore, Dr. K.V.A. Balaji, who was always ready to accommodate my requests, so that my research work could progress without hitches. I express my gratitude to him for the same.

Many of my colleagues have been of great help to me in times of difficulties during this research work. In particular, I want to recall the names of Rajashekar, S. and Ramesh, V., who were the constant source of inspiration for me. I thank them from the bottom of my heart for their help. I am also grateful to our college Administrative Officer Sri. Somashekara Murthy and Professor Nataraj of Sharada Vilas College, Mysore, for the help that they have rendered in conducting my survey of 270 households. Both of them have gone out of the way in getting many households to oblige for my interview.

The statistical analyses of this research report had to be supplemented by so many graphs and tables. I would like to place on record the help rendered by my colleague Dr. Mallesh Gowder for this effort. I thank him heart fully for his patience and eagerness to share his MS word and MS Excel expertise with me.

This part of the report would be incomplete if I don’t express my gratitude to all those households who sat patiently with me for more than an hour to provide inputs to my survey. Their help constitutes the life blood of this research work.

Last but definitely not the least, I want to express my heartfelt thanks and gratitude to my son Manu and wife Sumana for having tolerated the vagaries of my moods during this research work. I know I have not been able to make full justice to my responsibilities as a father and a husband during this time. But they have silently endured all the pressures so that my research work can proceed unhindered. I sincerely look forward to compensate for the same in future.

Somashekar. S
