CONTENTS

1. INTRODUCTION..........................................................pgs 14-28
2. MATERIALS AND METHODS........................................pgs 29-50

- Creating Aseptic Conditions for the Bacteria
- Reviving the Standard Culture of Enterobacter sakazakii (MTCC- 2958)
- Reviving the isolated and confirmed Enterobacter sakazakii, procured from lab
- Biochemical characterization
  ✓ Methyl Red Test
  ✓ Voges-Proskauer Test
  ✓ Indole Test
  ✓ Nitrate Test
  ✓ Catalase Test
  ✓ Oxidase Test
  ✓ Triple Sugar Iron (TSI) Agar Test
  ✓ Citrate Utilization Test
  ✓ Acid from Sugar

- Growing and Fixation of Biofilms for SEM
  ✓ Growing of the biofilms of standard culture of Enterobacter sakazakii (MTCC- 2958) and the isolate.
  ✓ Fixation of Biofilms on Substrates

- Preparation of planktonic cells for SEM

- Control of Biofilms
  ✓ Antibiotic susceptibility
  ✓ MIC of natural products against the biofilms
  ✓ Control of biofilms by LAB
Control of Planktonic cells of the isolate and the standard

3. RESULTS........................................................................................................pgs 51-81
   - Reviving
   - Biochemical characterization
   - Scanning Electron Microscope micrographs of the biofilms of the standard C.sakazakii (MTCC-2958) and the isolate on steel, aluminum and glass substrates.
   - Growth Control Of Biofilms By Antibiotics
   - Growth Control Of Biofilms By Natural Products
   - Growth Control Of Biofilms By LAB

4. DISCUSSION......................................................................................................pgs 82-90

5. CONCLUSION....................................................................................................pgs 91-92

6. SUMMARY..........................................................................................................pgs 93-95

7. REFERENCES......................................................................................................pgs 96-105
