Dedicated

...to my in-utero niece. The first gift from your uncle.
Acknowledgements

The fulfillment of this thesis has been a strengthening experience and overall a wonderful journey that gave me the opportunity to meet many incredible people who have influenced me in many ways.

First and foremost, my sincere and heartfelt gratitude goes out to my thesis supervisors Dr. Subhashini Srinivasan and Dr. Bibha Choudhary for giving me an opportunity to work under them during my Master’s project and further continue with my doctoral studies. I would like to thank them for this opportunity, which not only has been a wonderful learning experience, but also has deeply influenced me as a person. Their excellent guidance and uncompromising attitude has contributed immensely to my research work and in developing a scientific temper. They have also played a major role in improving my presentation and scientific writing skills. Their unending reserves of energy and organizational skills has always amazed me. Their foresight, critical assessment and fresh perspective of experimental results along with insightful interpretation have made the realization of this thesis possible. I deeply admire their multitasking skills, impartial prospect, sharp wit and command on many academic and non-academic subjects. I am especially thankful for their prudent guidance in my moments of doubt and encouragement in cultivating an inquisitive mindset.

I extend my gratitude to all the faculties of IBAB including the former director Prof. N. Yathindra and the current director Dr. H S Subramanya for their enthusiastic efforts in making IBAB inclusive engaging and upholding scientific excellence by providing and maintaining exceptional research facilities. A special mention of Mr. Abdulla Khan for efficiently maintaining the servers at IBAB is my pleasure. I would also like to thank IBAB for generously providing me fellowship.

I thank my Doctoral Advisory Committee members Prof. Usha Vijayraghavan and Dr. Amit Dutt for their suggestions and directions to take my work forward. I would like to thank both of
them for their interest in the progress of my research work, constant encouragement and for being accessible when I needed their counsel.

I am indebted to Dr. Raghunath for providing with the prostate tissue sample, Prof. Sathees C Raghvan for letting me use the radioactivity facility in his lab and Prof. Uday Kumar Ranga for providing me with the packaging vectors used for generation of lenti-viral particles.

Dr. Samiran, Harish and Ankita at Bangalore Bioinovation Center are duly acknowledged for their assistance in NanoITC and Confocal Microscopy.

I thank Samathmika Ravi who has been extremely supportive and instrumental through a major part of my thesis work. Her keen observation, self-sufficiency and meticulous style in planning experiments are of great value through most of the wet bench work. More than anything I would like to thank her for being an indulgent and stellar friend.

I have been fortunate to work with Savita Karthikeyan during generation of hg19K reference genome. She has been extremely supportive and instrumental in guiding me to rectify my mistakes. It was an utmost humbling and learning experience to work with her during the Data Analysis classes that we taught together. I believe it is next to impossible to find a partner like her again. I would also like to thank Harsh Shukla for his efforts in taking the alternate reference genome project forward and creating hg19KINDEL.

I would like to thank all other lab members, Meghana and Prabharan for their help with protein expression and purification, Jinsha and Snehal for their help in Cell cycle analysis, Vidya G for her help in mobility shift assay, Goldsmith Sir for his help with triplex model building, Sasikumar for his contribution towards ccfDNA and Indian Diaspora work and last but not the least Sagar and Suvratha for being amazing lab mates.

Extending a mere ‘thank you’ is not enough to Geetha and Grace who have accepted me into their fold and have always kept in touch with a word of encouragement to raise my spirits with a good dose of ‘pep-talk’. I miss the quantity and quality of time spent with them. I feel much honored to have met and bonded with them and the times spent with them will be forever cherished. These two have been no less than an inspiration in my life.
Roman philosopher Seneca has said that “While we teach, we learn,” and this has been true with me as well. I would like to thank my mentor Dr. Subhashini Srinivasan for providing me with an opportunity to teach Data Analysis to Master’s students at IBAB. I would like to thank all my 75+ students from whom I have learned something new every hour. I express my gratitude to a few of them Rohita, Pramod, Sanjyot, Aravind, Swagatika, Surbhi, Rachita, Shruti, Tanisha, Harsh, Promit, Harshit and Mansi for their help and enthusiastic presence. I specially thank Rachita for helping me with proof reading my thesis.

When one stays away from home for almost a decade they are bound to have friends who are no less than family. I have been blessed to have few such friends whom I can call my family. A big shout-out to Ankeet, Heta, Huzefa, Mayur, Priyanka, Rajvee, Surbhi, Swati and Swapnil for always being there.

The most important acknowledgment is reserved for my parents for being my pillar of strength. More than many a times, they have kept their apprehensions and worries aside and have believed in me completely and have given my education their topmost priority. I will try to emulate their shining example in everything that I do and whatever I have accomplished in my life I owe it all to both of them. I cannot thank my sisters and brothers-in-law enough for being an unending source of love and inspiration. I would like to end this by mentioning two of the gentlest souls I have known, my 11 year old niece (Harsimar) and my 5 year old nephew (Harjot), who can never fail to make me happy. I hope god showers them with happiness throughout their life.
