List of Tables:

CHAPTER 3:
3.1a: Estimated nano-structural or (and) microstructural parameters, using SEM micrographs at CdCl₂ concentration (0.3 wt% up to 5.4 wt%) in PVA-PVP blend films. 84
3.1b: Estimated Nano/Micro-structural parameters using SEM micrographs at CdCl₂ concentration (6.3 wt% up to 11.3 wt%) in PVA-PVP blend films. 87
3.2: Calculated structural parameters, from XRD spectra. 105

CHAPTER 4:
4.1: Activation energy and optical band gaps which correspond to direct and indirect allowed transitions at three various energy regions. 123
4.2: Estimated optical parameters from the first procedure. DL denotes the doping level of CdCl₂ in PVA-PVP blend films. The other terms have their usual significance (which has been described in the text). 129
4.3: List of estimated optical parameters obtained from the second procedure. 133
4.4: FT-Raman and FTIR peak assignments of pure and CdCl₂ doped PVA-PVP blend films. 140
4.5: Intensity (Iᵢ), and Area (Aᵢ) for four different (i= 1 to 4) emission (fluorescence) peaks, from multiple Gaussian fitting at a different dopant concentration of CdCl₂ in PVA-PVP blend. The excitation wavelength is 355 nm. 158

CHAPTER 5:
5.1: Activation energies for charge carrier mobility extracted from experimental study of temperature dependence of DC electrical conductivity of PVA-PVP blend films, doped with different concentrations (doping levels, DL) of CdCl₂. 176
5.2: Transference number for electrons (tₑₑ) and ions (tᵢᵢ). 178
5.3: Parameters from dielectric measurements at different set temperatures, for 0.0 wt% and 10.2 wt% (doping level) of CdCl₂ in PVA-PVP blend films. 187
5.4: Dependence of ’s’ and barrier potential (Wₗ) on the absolute temperature (T) for pure and 10.2 wt% CdCl₂ in PVA-PVP blend films. 189
5.5: Activation energy (in eV), for 0.0 wt% and 10.2 wt% (doping level) of CdCl₂ in PVA-PVP blend films, at different frequencies. 195

5.6: Dependence of 's' and barrier potential ($W_h$) on the absolute temperature (T=299K) at different concentration of CdCl₂ in PVA-PVP blend film. 200

CHAPTER 6:
6.1: Estimated values of glass transition temperature $T_g$, melting temperature $T_m$ and decomposition temperature $T_d$ from DSC curves. 219
6.2: Onset and Offset temperature at five different stages of decomposition, at different concentrations of CdCl₂ in PVA-PVP blend film. 229
6.3: Estimated kinetic parameters from the FWO, KAS and Kissinger models, at three thermal decomposition stages. 233

CHAPTER 7:
7.1: Wavelength and energy of electromagnetic radiations (photons). 245
7.2: Covalent bond energies in keV/atom and kJ/mol. 245
7.3. Skin depth ($\delta$) for 4.885 eV photons in CdCl₂ doped PVA- PVP blend films, doped to different levels (DL indicates the doping level). 248
7.4: Activation energy and optical band gaps, which correspond to direct and indirect allowed transitions in two different energy regions. 253
7.5: Area, intensity and quantum yield from emission spectra, for UV exposure time intervals of 0 minute (un-irradiated sample), 30 minutes and 180 minutes. In the second column, the quantity ‘Q’ represents area (A) or intensity (I) or quantum yield ($\Phi$) of the emission (fluorescence) peaks, respectively. 256
7.6: Peak assignments from FTIR spectra of CdCl₂ doped PVA-PVP blend films in terms of wavenumber (cm⁻¹). 259
7.7: Raman peak assignments of CdCl₂ doped PVA-PVP blend films in terms of wavenumber (cm⁻¹). 261
