ACKNOWLEDGEMENTS

This milestone of my career is the culmination of the contributions made by all my well-wishers in their different roles at different point of time. At this nostalgic moment, I take this opportunity to pay my deep sense of gratitude and respect to all.

First and foremost, I would like to express my heartfelt gratitude to Dr V.C. Kalia for his guidance and constant support throughout my research work. He played his role to the perfection as a leader, as a torchbearer who polished my skills and awakened a researcher in me. His passion and attitude towards work has been main driving and motivating force.

Apart from Dr Kalia, this thesis work has evolved through many formal and informal discussions with Dr C.P. Raut, Dr Yogender Singh and Dr Rakesh Sharma; Scientists; Institute of Genomics and Integrative Biology. Their contributions as Thesis committee members are immense and well justified. They have always been encouraging and supportive. They have helped me at all the stages of my experiments, right from chalking down the plan of the experiments, interpretations of the results and possible solutions to the problems faced by me during the research. I would also like to express my gratitude to Dr. Hemant J. Purohit, Scientist, National Environmental Engineering Research Institute (NEERI), CSIR, Nagpur, for providing me scientific advices and expertise.

I would like to thank Prof. Samir K. Brahmchari; D.G., CSIR, former Director, IGIB and Dr K.C. Gupta; Acting Director, IGIB for providing me the facilities and infrastructure to pursue my Ph.D. I extend my heartiest thanks to Dr. Rekha Chaturvedi, Scientist, Head, PME division for her timely help and support.

I wish to record my thanks to my colleagues who have been very supportive all the time. Ms. Asha, Dr Sadhana, Dr Rashmi and Mr. Manabendra have been
idealistic seniors who shared their invaluable technical knowledge and expertise, which helped me greatly. Ms. Mamtesh and Mr. Sanjay have been excellent juniors and their support is of utmost importance. My heartiest thanks to all of them.

The consistent support of my friends (also my classmates in post graduation) in IGIB who were part of different labs during the same period helped me immensely. Their friendship and suggestions have helped me gain a new perspective. Ms. Preeti, Ms. Jayashree and Mr Raj have all been there to encourage me. I would like to thank Mr. Arvind, Mr. Gaurav, Mrs. Manisha and Mrs. Shipra for their support. I appreciate their friendship.

I wish to express my gratitude towards my teachers in school, college and University for moulding me and channelizing my scientific temperament in the right direction. My deep sense of gratitude to:

My loving parents, grandparents and chacha-chachi for inculcating the right values and developing a holistic approach towards life in general and science in particular without whose love and support I would have been nothing. They have been very patient and supportive of all the experiments that I embarked on since my childhood. My sisters Ms. Ruchika, Ms. Mrigna, Ms. Vanika and my lovely brother Mr. Mrigesh deserve special thanks for their unconditional love and cooperation.

A special note of thanks to my caring and loving in laws who have always been pouring blessings on me. I would always be thankful to GOD for making me a part of this great family. Finally, I would steal the opportunity to thank my dear husband, Mr. Sanjeev who has been the best of the companions and has been helping me continuously in reinventing and evolving myself through his inspiring thoughts.

Tarika Kumar
