LIST OF TABLES

CHAPTER 2
Table 2.1  Chemical constituent of plants exhibiting anticancer activity
Table 2.2  List of plants exhibiting anticancer activity
Table 2.3  Commercially available herbal anticancer drugs
Table 2.4  Chemical constituents present in dietary product
Table 2.5  List of plants exhibiting antioxidant activity
Table 2.6  Antioxidant drugs and their side effects
Table 2.7  Nanoparticle embedded flavonoid
Table 2.8  Anticancer activity of 3,6-dihydroxyflavone
Table 2.9  Antioxidant activity of lutein
Table 2.10 Selenium methyl selenocysteine as sensitizer
Table 2.11 Combination studies of flavonoids

CHAPTER 5
Table 5.1  Schematic pattern of the combination study of three native dietary compounds against doxorubicin as standard drug
Table 5.2a  In vitro cytotoxic effects of single and combination treatments of 3,6-dihydroxyflavone, lutein and selenium methyl selenocysteine (Single, double and triple combination) on MCF-7 breast cancer cell line using MTT, TBE and SRB bioassays
Table 5.2b  In vitro cytotoxic effects of single and combination treatments of 3,6-dihydroxyflavone, lutein and selenium methyl selenocysteine (Single, double and triple combination) on MDA-MB-468 breast cancer cell line using MTT, TBE and SRB bioassays
Table 5.3  Schematic pattern of the nanotech and combination enforcement study of test compounds against doxorubicin as standard drug on the basis of their IC_{50} value
Table 5.4a  In vitro cytotoxic effects of single and combination treatments of gold nanoparticle embedded 3,6 dihydroxyflavone, lutein and selenium methyl selenocysteine (Single double and triple combination) on MCF-7 breast cancer cell line using MTT, TBE and SRB bioassays
Table 5.4b  In vitro cytotoxic effects of single and combination treatments of gold nanoparticle embedded 3,6 dihydroxyflavone, lutein and selenium methyl selenocysteine (Single, double and triple combination) on MDA-MB-468 breast cancer cell line using MTT, TBE and SRB bioassays.
Table 5.5  Combination effect of gold nanoparticle embedded 3,6 dihydroxyflavone with lutein and selenium methyl selenocysteine against standard doxorubicin on body weight, tumor volume and tumor delay time of Balb/c mice after induction of sarcoma 180 cancer cells.
Table 5.6  Combination effect of gold nanoparticle embedded 3,6 dihydroxyflavone with lutein and selenium methyl selenocysteine against standard doxorubicin on percent of aberrant metaphases in the bone marrow of Balb/c mice after induction of sarcoma 180 cancer cells.
