LIST OF TABLES

Table-1: Physicochemical properties of the distillery effluent from M/s Mc. Dowell’s & Co. Varanad, Cherthala, Alappuzha, Kerala

Table-2: Effect of the distillery effluent on Germination Percentage and Mobilization Efficiency Percentage in the two varieties of Oryza sativa L.

Table-3: Effect of the distillery effluent on Root Length (cm) and Shoot Length (cm) after 96 hours of sowing in the two varieties of Oryza sativa L.

Table-4: Effect of the distillery effluent on Seedling Fresh Weight (mg) and Percentage Dry Matter Production after 96 hours of sowing in the two varieties of Oryza sativa L.

Table-5: Effect of the distillery effluent on Shoot : Root Ratio (length and dry weight basis) after 96 hours of sowing in the two varieties of Oryza sativa L.

Table-6: Effect of the distillery effluent on Seedling Vigour Index (length and dry weight basis) after 96 hours of sowing in the two varieties of Oryza sativa L.

Table - 7: Effect of the distillery effluent on Total Sugar content (µg mg⁻¹) and Reducing Sugar content (µg mg⁻¹) after 96 hours of sowing in the two varieties of Oryza sativa L.

Table - 8: Effect of the distillery effluent on Starch content (µg mg⁻¹) after 96 hours of sowing in the two varieties of Oryza sativa L.

Table - 9: Effect of the distillery effluent on Protein content (µg mg⁻¹) and Total Free Aminoacid content (µg mg⁻¹) after 96 hours of sowing in the two varieties of Oryza sativa L.

Table - 10: Effect of the distillery effluent on Proline content (µg mg⁻¹) and Total Phenol content (µg mg⁻¹) after 96 hours of sowing in the two varieties of Oryza sativa L.

Table - 11: Effect of the distillery effluent on Amylase activity (µg maltose produced min⁻¹ mg⁻¹ fresh weight with 1% starch) and Invertase activity (µg glucose produced min⁻¹ mg⁻¹ fresh weight with 1% sucrose).
mg⁻¹ fresh weight) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Table - 12: Effect of the distillery effluent on Protease activity (µg hour⁻¹ mg⁻¹) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Table - 13: Effect of the distillery effluent on Catalase activity (µmoles of H₂O₂ split min⁻¹ mg⁻¹ fresh weight) and Peroxidase activity (difference in OD min⁻¹ mg⁻¹ fresh weight) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Table - 14: Effect of the distillery effluent on Root length (cm) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 15: Effect of the distillery effluent on Shoot length (cm) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 16: Effect of the distillery effluent on Number of Tillers at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 17: Effect of the distillery effluent on Fresh weight (gram) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 18: Effect of the distillery effluent on Percentage Dry Matter Production at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 19: Effect of the distillery effluent on Mean Leaf Area (cm²) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 20: Effect of the distillery effluent on Shoot : Root Ratio (length basis) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 21: Effect of the distillery effluent on Shoot : Root Ratio (dry weight basis) at different stages of growth in the two varieties of *Oryza sativa* L.
Table - 22: Effect of the distillery effluent on Relative Growth Rate (g g⁻¹ day⁻¹) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 23: Effect of the distillery effluent on Net Primary Production (g plant⁻¹ day⁻¹) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 24: Effect of the distillery effluent on Net Assimilation Rate (g cm⁻² day⁻¹) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 25: Effect of the distillery effluent on Leaf Area Ratio (cm² g⁻¹) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 26: Effect of the distillery effluent on Number of Productive Tillers and Panicle Length (cm) in the two varieties of *Oryza sativa* L.

Table - 27: Effect of the distillery effluent on Panicle Weight and 1000 Seed Weight in the two varieties of *Oryza sativa* L.

Table - 28: Effect of the distillery effluent on Total Sugar content (µg mg⁻¹ fresh weight) at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Table - 29: Effect of the distillery effluent on Reducing Sugar content (µg mg⁻¹ fresh weight) at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Table - 30: Effect of the distillery effluent on Starch content (µg mg⁻¹ fresh weight) at the vegetative and the reproductive stages in the two varieties of *Oryza sativa* L.

Table - 31: Effect of the distillery effluent on Protein content (µg mg⁻¹ fresh weight) at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Table - 32: Effect of the distillery effluent on Total free aminoacid content (µg mg⁻¹ fresh weight) at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.
Table - 33: Effect of the distillery effluent on Proline content (µg mg⁻¹ fresh weight) at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Table - 34: Effect of the distillery effluent on Total Phenol content (µg mg⁻¹ fresh weight) at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Table - 35: Effect of the distillery effluent on Amylase activity (g maltose produced min⁻¹ mg⁻¹ fresh weight with 1% Starch) at the vegetative and the reproductive stages in the two varieties of *Oryza sativa* L.

Table - 36: Effect of the distillery effluent on Invertase activity (µg glucose produced min⁻¹ mg⁻¹ fresh weight) at the vegetative and reproductive stages in the two varieties of *Oryza sativa* L.

Table - 37: Effect of the distillery effluent on Protease activity (µg peptide fragments formed hour⁻¹ mg⁻¹ fresh weight) at the vegetative and the reproductive stages in the two varieties of *Oryza sativa* L.

Table - 38: Effect of the distillery effluent on Catalase activity (µmoles of H₂O₂ split min⁻¹ mg⁻¹ fresh weight) at the vegetative and the reproductive stages in the two varieties of *Oryza sativa* L.

Table - 39: Effect of the distillery effluent on Peroxidase activity (difference in OD min⁻¹ mg⁻¹ fresh weight) at the vegetative and the reproductive stages in the two varieties of *Oryza sativa* L.

Table - 40: Effect of the distillery effluent on Total Chlorophyll content (µg mg⁻¹ fresh weight) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 41: Effect of the distillery effluent on Chlorophyll-a content (µg mg⁻¹ fresh weight) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 42: Effect of the distillery effluent on Chlorophyll-b content (µg mg⁻¹ fresh weight) at different stages of growth in the two varieties of *Oryza sativa* L.
Table - 43: Effect of the distillery effluent on Nitrogen content (%) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 44: Effect of the distillery effluent on Phosphorus content (%) at different stages of growth in the two varieties of *Oryza sativa* L.

Table - 45: Effect of the distillery effluent on Potassium content (%) at different stages of growth in the two varieties of *Oryza sativa* L.
