LIST OF FIGURES

Figure-1: Effect of the distillery effluent on Germination Percentage and Mobilization Efficiency Percentage in the two varieties of *Oryza sativa* L.

Figure-2: Effect of the distillery effluent on Root length and Shoot length after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Figure-3: Effect of the distillery effluent on Seedling Fresh Weight (mg) and Percentage Dry Matter Production after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Figure-4: Effect of the distillery effluent on Shoot Root Ratio (length and dry weight basis) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Figure-5: Effect of the distillery effluent on Seedling Vigour Index (length basis and Dry weight basis) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Figure-6: Effect of the distillery effluent on Total Sugar Content (µg mg⁻¹) and Reducing Sugar Content (µg mg⁻¹) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Figure-7: Effect of the distillery effluent on Starch content (µg mg⁻¹) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Figure-8: Effect of the distillery effluent on Protein content (µg mg⁻¹) and Total Free Aminoacid Content (µg mg⁻¹) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Figure-9: Effect of the distillery effluent on Proline content (µg mg⁻¹) and Total Phenol Content (µg mg⁻¹) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Figure-10: Effect of the distillery effluent on Amylase activity (µg maltose produced min⁻¹ mg⁻¹ fresh weight with 1% starch) and Invertase activity (µg glucose produced min⁻¹ mg⁻¹ fresh weight) after 96 hours of sowing in the two varieties of *Oryza sativa* L.
Figure-11: Effect of the distillery effluent on Protease activity (µg peptide fragments formed hour\(^{-1}\) mg\(^{-1}\) fresh weight) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Figure-12: Effect of the distillery effluent on Catalase activity (µmoles of H\(_2\)O\(_2\) split min\(^{-1}\) mg\(^{-1}\) fresh weight) and Peroxidase activity (difference in OD min\(^{-1}\) mg\(^{-1}\) fresh weight) after 96 hours of sowing in the two varieties of *Oryza sativa* L.

Figure-13: Effect of the distillery effluent on Root length at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure-14: Effect of the distillery effluent on Root length at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.

Figure-15: Effect of the distillery effluent on Shoot length at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure-16: Effect of the distillery effluent on Shoot length at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.

Figure-17: Effect of the distillery effluent on Number of Tillers at different stages of growth in the two varieties of *Oryza sativa* L.

Figure-18: Effect of the distillery effluent on Fresh Weight at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure-19: Effect of the distillery effluent on Fresh Weight at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.

Figure-20: Effect of the distillery effluent on Percentage Dry Matter Production at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure-21: Effect of the distillery effluent on Percentage Dry Matter Production at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.

Figure-22: Effect of the distillery effluent on Mean Leaf Area at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure-23: Effect of the distillery effluent on Mean Leaf Area at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.
Figure 24: Effect of the distillery effluent on Shoot Root Ratio (length basis) at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure 25: Effect of the distillery effluent on Shoot Root Ratio (length basis) at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.

Figure 26: Effect of the distillery effluent on Shoot Root Ratio (dry weight basis) at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure 27: Effect of the distillery effluent on Shoot Root Ratio (dry weight basis) at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.

Figure 28: Effect of the distillery effluent on Relative Growth Rate at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure 29: Effect of the distillery effluent on Relative Growth Rate at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.

Figure 30: Effect of the distillery effluent on Net Primary Production at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure 31: Effect of the distillery effluent on Net Primary Production at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.

Figure 32: Effect of the distillery effluent on Net Assimilation Rate at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure 33: Effect of the distillery effluent on Net Assimilation Rate at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.

Figure 34: Effect of the distillery effluent on Leaf Area Ratio at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 16.

Figure 35: Effect of the distillery effluent on Leaf area Ratio at 30, 60 and 90 DAT in *Oryza sativa* L. var. MO 19.
Figure-36: Effect of the distillery effluent on Number of Productive Tillers and Panicle Length the two varieties of *Oryza sativa* L.

Figure-37: Effect of the distillery effluent on Panicle Weight and 1000 Seed Weight in the two varieties of *Oryza sativa* L.

Figure-38: Effect of the distillery effluent on Total Sugar content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure-39: Effect of the distillery effluent on Reducing Sugar content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure-40: Effect of the distillery effluent on Starch content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure-41: Effect of the distillery effluent on Protein content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure-42: Effect of the distillery effluent on Total free aminoacid content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure-43: Effect of the distillery effluent on Proline content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure-44: Effect of the distillery effluent on Total Phenol content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure-45: Effect of the distillery effluent on Amylase activity at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure-46: Effect of the distillery effluent on Invertase activity at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.
Figure- 47: Effect of the distillery effluent on Protease activity at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure- 48: Effect of the distillery effluent on Catalase activity at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure- 49: Effect of the distillery effluent on Peroxidase activity at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure- 50: Effect of the distillery effluent on Total Chlorophyll content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure- 51: Effect of the distillery effluent on Chlorophyll-a content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure- 52: Effect of the distillery effluent on Chlorophyll-b content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure- 53: Effect of the distillery effluent on Nitrogen content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure- 54: Effect of the distillery effluent on Phosphorus content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.

Figure- 55: Effect of the distillery effluent on Potassium content at the vegetative and reproductive stages of growth in the two varieties of *Oryza sativa* L.
