LIST OF FIGURES

Figure
1.1 Study area location map 6
2.1 Terminology for describing landslide features 9
2.2 Description of landslide parts 9
2.3 Schematic illustration of major types of landslide movements 13
2.4 Changes in factor of safety with time 14
2.5 A typical example for debris flow 17
2.6 Origin of a debris flow 18
2.7 Common features associated with debris flows 19
2.8 Landslide risk assessment procedure 20
3.1 Schematic diagram of a typical back-propagation ANN 46
4.1 Lithology map of the area 58
4.2 Geomorphology map of the area 60
4.3 Drainage network map of the area 61
4.4 Drainage density map of the area 62
4.5 Soil type map of the area 63
4.6 Soil thickness map of the area 64
4.7 IRS P6 L 3 image of the area 65
4.8 Land use map of the area 66
4.9 NDVI image of the area 67
4.10 Elevation map of the area 68
4.11 Gray scale relief image with 1x exaggeration 69
4.12 Slope map of the area 70
4.13 Aspect map of the area 71
4.14 Relative relief map of the area 72
4.15 Slope length map of the area 73
4.16 Profile curvature map of the area 74
4.17 Plan curvature map of the area 75
4.18 Flowpath length map of the area 76
4.19 Compound Topographic Index map of the area 77
5.1 Map showing the landslide distribution in the area over the model relief map 78
5.2 Debris flows occurred in different places in the study area 79
5.3 Debris flows occurred in different places in the study area 80
5.4 The virtual partition showing the slides used for prediction and validation 81
5.5 Methodological flow chart 82
5.6 Reclassified drainage density map 83
5.7 Reclassified soil thickness map 84
5.8 Reclassified NDVI map 84
5.9 Reclassified slope map 85
5.10 Reclassified aspect map 85
5.11 Reclassified relative relief map 86
5.12 Reclassified slope length map 86
5.13 Reclassified profile curvature map 87
5.14 Reclassified plan curvature map 87
5.15 Reclassified flowpath length map 88
5.16 Reclassified CTI map 88
5.17 Study area mask used for the analysis 89
5.18 Calculation of the prior probability 91
5.19 Relationship between landslide events and evidential theme classes 91
5.20 Venn diagram illustrating the relationships between presence/absence of evidential theme classes and presence/absence of landslide events 92
6.1 Weights, contrast and studentised contrast values of evidential themes
   (a). Geomorphology (b). Drainage density (c). Soil type
   (d) Soil thickness (e) Land use and (f). NDVI 110
6.2 Weights, contrast and studentised contrast values of evidential themes
   (a). Slope (b). Aspect (c). Relative relief (d). Slope length
   (e) Profile curvature and (f). Plan curvature 111
6.3 Weights, contrast and studentised contrast values of evidential themes
   (a). Flow path length (b). Compound Topographic index 112
6.3 Final landslide susceptibility index map generated using the WofE model 115
6.5 Graphical representation of landslide susceptibility classes 116
6.6 ROC curve of the developed model 117
6.7 Panchayath-wise landslide susceptibility zonation map generated using the WofE model 119
6.8 Graphical representation of rainfall for last 11 years 121
