

LIST OF TABLES

Table 1.1 Classification of speech coders based on the bit-rate

Table 3.1 Ideal world categorization scheme

Table 3.2 Real world categorization scheme

Table 4.1 Allocation of bits to a stage

Table 4.2 Allocation of bits to each split of a stage

Table 4.3 Spectral distortion, Complexity and Memory requirements for a 3-part Split Vector Quantizer

Table 4.4 Spectral distortion of a 3-part Split Vector Quantizer for different priorities

Table 4.5 Spectral distortion, Complexity and Memory requirements for a 3-stage Multistage Vector Quantizer

Table 4.6 Spectral distortion of a 3-stage Multistage Vector Quantizer for different priorities

Table 4.7 Spectral distortion, Complexity and Memory requirements for a 3-part 3-stage Split-Multistage Vector Quantizer

Table 4.8 Spectral distortion, Complexity and Memory requirements for a 2-switch 3-part Switched Split Vector Quantizer using hard decision scheme
Table 4.9  Number of unstable frames for 3-part SVQ, 3-part 3-stage S-MSVQ and 2-switch 3-part SSVQ using hard decision scheme with no ordering constraint 105

Table 5.1  Spectral distortion, Complexity and Memory requirements for a 2-switch 3-stage Switched Multistage Vector Quantizer using hard decision scheme 118

Table 6.1  Computational complexities of various vector quantization techniques at different bit-rates 132

Table 6.2  Memory requirements of various vector quantization techniques at different bit-rates 133

Table 6.3  Spectral distortion, Complexity and Memory requirements for a 2-switch 3-part 3-stage MSSVQ hard decision scheme 134

Table 6.4  Number of unstable frames for a 2-switch 3-part 3-stage MSSVQ hard decision scheme with no ordering constraint 135

Table 6.5  Spectral distortion of various vector quantization techniques at different bit-rates 135

Table 6.6  Outliers between 2 to 4 dB of various vector quantization techniques at different bit-rates 136

Table 6.7  Outliers greater than 4 dB of various vector quantization techniques at different bit-rates 137
Table 7.1  Score of recognizing a word ‘ONE’ at 20 bits per frame using SVQ, MSVQ, S-MSVQ, SSVQ using hard decision scheme, SWMSVQ using hard decision scheme and MSSVQ using hard decision scheme
