“The aim of a PhD is to ensure that no one, including your advisor, understands what you're doing after the first couple of years.”

― China Miéville

First and foremost has to be Jyotsna for giving me this opportunity. I don’t think I would have ever thought of doing a PhD if not for her. She has been a constant support throughout, even after umpteen failed experiments. Her continuous encouragement and out of the box ideas have helped me transform this PhD from a collection of random ideas into a coherent story. Her push to look at the larger picture and stop focusing on perfecting that one experiment really helped me finish my PhD (wise words). Her support through some of the most trying times, especially during all the transitions, meant that I could always focus on my PhD and not worry about anything else. But most important, she was always there for us whenever we needed her help, no matter what the circumstances. Thank you so much.

I can now also confidently say that I’m very competent in moving labs, from one wing to another, or one to city to another. But I don’t think I’ll try moving a lab from one country to another. Some things are just best left undone.

My TCM members Panic and Maneesha, thank you for your help and guidance through these years. Your valuable suggestions during my many TCM presentations really helped move my project forward. Unfortunately my attempts at placating you'll with chocolate chip cookies during TCM presentations utterly failed.

Kouichi and Ramkumar, thank you for patiently listening to all my crazy ideas and brainstorming with me to get this project moving. A special thanks for continuously telling me to stop trying to be fancy, just do simple experiments and submit. Probably one of the best pieces of advice ever given to a PhD student.

Colin, Das, Ramanuj, Shravanti and Srikala, thanks for all the great ideas and suggestions over the years. A special shout out to Das for the great time we had at probably the first and last inStem BBQ.

The JD lab, past and present. Abhijit (my partner in crime during our lab indenting days), Abinaya (for all the help across cities), Ajoy (our long discussions on mallu cuisine, beef
curry and appams!!), Amena (for all the post it notes), Ananga, Ankita, Balu, CSP (our
crazy mango buying sprees from GKVK to Kothapet), Debaraya (our endless discussion
on food and fashion), Farah, Foram, Guna, Gunjan (moong dal halwa, it’s the best), Malini
(Onam sadhya, the best one ever), Nainita, Neha (amazing scientific fortitude), Pablo
(our endless movie discussions), Padmaja, Prabhavathy (my crazy lab bench partner),
Priti, Pritish, Reety (ever smiling and always ready to help), Rumman, Shivaji (who
organised JD lab like no other), Sirisha, Sreyya, Sujoy, Swati, Swetha G, Swetha S (aka DJ
SS), Utkarsh, Wendy (a rock during the early days of inStem and the person who
introduced me to BBQing), Vinay (for setting up the first lab at inStem).

I would like to especially thank Hardik and Nisha who have been with me at every stage
of the journey, from Hyderabad to Bangalore and back again. You guys have really been
great friends and we’ve been to hell and back. It’s like Chumbawamba said, “I get
knocked down, but I get up again, you are never gonna keep me down.” Couldn’t have
done it without you guys.

Deepika, Surabhi, Purna and Kinu for our great times together in the early days of the
lab. Still remember our late nights in the lab, working crazy hours, ordering Indian
Chinese, eating on makeshift ‘plates’ and messing up Amena’s table.

Anagh my former flatmate and the person who taught me how to properly cook after the
disastrous capsicum incident. Our Sunday cookouts were so much fun and I shall always
cherish our weird conversations in the chapatti production line with Hardik and Tanvi. A
special thanks for all your help during my final days in Bangalore, things would have
really gone downhill if it weren’t for you.

Definitely the craziest person I have ever met in my life, Dipthi, we’ve had a lot of crazy
times together, and I hope they keep on coming. Stay crazy!

I’ve had the honour of watching inStem grow from a single room in the NCBS admin
building, to a single floor and now a whole building complex and over the years I have
had the good fortune of meeting so many great people. The old inStem crew, the ones
who were there from the beginning, Ramaswamy, Vidyananad, Srikar, Dhiru, & Aparna.
My cubicle mates, super talented Ananya, Radhika ‘Radical’ Rao, and especially Nirai.
The Bangalore BBQ gang Vaibhav, Anup, Chitra, Pushki. We’ve had some great times
together and the intense Pictionary sessions shall forever be remembered. The
Pictureka gang, ‘my evil brother from another mother’ Giselle, the always biased judge Jesvin, Chloroplast and Tannins Shlesha and Siddarth, Cyrus and Arnab. Panic lab people Radhika M & Shadaan (who forced me to watch Before Sunrise, I’m scarred for life), Shuchita (our endless Batman discussions), Selvam, Tara, and Megha. My Haleem buddies Kritika and Balaji. Sanjay lab people Harshada, Tanvi, Taruni, Nitesh, Alisha and also Prasanjeet and Chaitanya who are technically not Sanjay lab. A whole host of NCBS/inStem people, Nisha R, Shrey, Megha, Rohan, Mугдха, Deepak, Vairavan, Rohan, Ketan, Michelle.

The Hyderabad BBQ gang and probably the only reason I haven’t lost my sanity in this place. Jayesh (one of my oldest friends here and will probably forever be remembered for the aircooler incident and my stupid antics on a bike), Aditya (who believes that you can never have too much butter, cream or cheese in a dish), Aswan (who doesn’t understand the concept of less spicy), Asha (the funny minion), Keith (the best pastry chef), Raju (dancing queen), MasterChef Roshan, Sheila (and his unique laugh), Shambhavi, Shreekant, & Shailaja (who is lost as always).

To all the CCMB peeps, Richa and Vidhya (my western gurus and go to dessert people), Sadiya & Alok (beef curry and special pulav, it was divine), Sreetama, Apu, Tej, Shivali (the mini hulk), Fathima (a kilo of cake is never enough for her), Seb & Bhindu, Erica, MasterChef Upasana (I don’t think I have ever spoken about food so much with anyone else).

TC friends (I think I’ve spent more time with them in TC, than anywhere else) Haripriya, Zubair, Gopal, Shivranjini and most important TC staff Varalakshmi, Easra, and Pulama without whom the TC would not be so efficient as it is.

A special shout out to the SKRLJS gang, from our humble beginnings at zero 40 to God knows where next.

Instrumentation, Asha, Mahesh, Syam, Gautam, Jayaprakash, and ever smiling Allwyn. Chakrapani, for helping us out so many times with never a complaint. Lab support Ranjith, Manjunath, your help during the early years at inStem were invaluable. Admin, Valsala, Archan, Shobha, Vishalakshi and Ramprasad these people made all the paperwork go so smooth. CIFF, Krishna, Navya & Smitha for teaching me the basics of imaging and flow cytometry.
I don't think this thesis would have ever been completed if it weren't for the immense help of Shambhavi and Prabha, thank you so much.

Finally, my parents, for their never ending support, love and patience. I am who I am because of them and I could have never gotten this far without them. As my PhD tenure kept on increasing, they kept on asking, when will your PhD get done? How long will it take? You keep saying six months more, when will it finally end?

I can now finally say, it’s done.
