AIMS AND OBJECTIVES:

Aim of the Study:

Assessment of Raktadhara Kala with special reference to its Anatomical considerations using an animal model.

Objectives of the Study:

“Confirmation of Anatomical structure of Raktadhara Kala in animal model” is taken under the present study to review the anatomical distribution of Raktadhara Kala in the light of modern sciences.

Since ‘Kala Shareera’ is a science of specialized limiting line / membrane holding the biological products under the structural organization of the body, therefore the anatomical limitation of the particular Raktadhara Kala is essentially needed to be determined. Because of the fact that, the blood is very essential part of the body which is evolved for the purpose to support the body and maintain life process by maintaining homeostasis in body and so Raktadhara kala.

Following objectives will be specially attempted to be achieved:

1. To compile and compare the references of Raktadhara Kala from different Ayurved Texts.

2. To compile information from Modern Anatomical literatures.

3. To compare Ayurved and modern literatures in this regard.

4. To confirm the Sthana of Raktadhara Kala on the basis of Animal study observations.
