List of Tables

**Table 3.1** Optimum parameters for synthesis of chitosan-gelatin, gelatin and chitosan cryogels and their percent degree of crosslinking 42

**Table 3.2** Morphological analysis of chitosan-gelatin cryogels 45

**Table 3.3** Physiological analysis of chitosan-gelatin cryogels 45

**Table 3.4** Elastic modulus and compressive strength of synthesized cryogels 47

**Table 3.5** Summary of the characteristics of agarose-gelatin cryogels prepared in different solvent systems 58

**Table 3.6** Characteristics of agarose-alginate cryogels prepared in different concentration 81

**Table 4.1** Batch fermentation process in production (P2) medium i.e. set B 139

**Table 4.2** Batch fermentation process in clostridium nutrient medium (CNB) followed by production (P2) medium i.e., set C 140

**Table 4.3** The quantitative determination of protein samples by BCA assay and total enzyme activity of β-glucosidase in different sample fractions 157

**Table 4.4** The calculated purification factor, recovery and yield of β-glucosidase 158
