CONTENTS

1. Introduction to Numerical Analysis 6-41
   ➢ Numerical analysis
   ➢ Error considerations
   ➢ Solution of linear equations
   ➢ Approximation of data and functions
   ➢ Approximation of integrals and derivatives
   ➢ Differential equations
   ➢ Computational mathematics
   ➢ Theory of Errors
   ➢ Approximation theory - Types of Approximation
   ➢ Numerical analysis - overview
   ➢ Accuracy of shock-capturing
   ➢ Stability analysis for unstructured grids
   ➢ References

2. Interpolation 43-70
   ❖ Interpolation formula
   ❖ Interpolation in numerical mathematics
   ❖ The approximate representation and calculation of functions
   ❖ Numerically solving systems of non-linear equations
   ❖ Numerical differentiation
   ❖ Numerical integration
   ❖ Numerically solving differential equations
   ❖ Numerically solving integral equations
   ❖ Interpolation of operators and some general approaches to the construction of numerical methods.
   ❖ Interpolation process
   ❖ References
3. Accuracy of Various Interpolation Formulas For Some Simple Functions

- Introduction
- Accuracy of Interpolation Formulas
- Methodology
  - Node
  - Newton's Forward Difference Formula
  - Newton's Backward Difference Formula
  - Gauss interpolation formula
  - Lagrange interpolation formula
  - Stirling interpolation formula
  - Bessel interpolation formula
  - Newton's Divided Difference Formula
- Result and Discussion
- Conclusion
- References
