

CONTENTS

Title of the Thesis	i
Certificate	ii
Declaration of the Candidate	iii
Acknowledgement	iv
Contents	vi
CHAPTER-1. INTRODUCTION	1
1.1. Definition of ion-pairs and triple ions	2
1.2. Various types of interactions	4
1.3. Concept of ion pair and triple ion formation	6
1.4. Effect of shape and size	16
1.5. Solvation number	17
1.6. Limiting equivalent conductance and walden product	18
1.7. Limitation of the concept of ion pairs and triple ions	21
1.8. Scope of the study	22
CHAPTER-2. REVIEW	24
2.1. Conductometric method	24
2.2. Ion pair and triple ion formation in 2:1 complexes and 1:1 complexes	25
2.3. Solvent mixtures	37
2.4. Effects of pressure on the electrolytic conductance	39
2.5. Spectrophotometric/Spectroscopic method	40
CHAPTER-3. METHODOLOGY	46
3.1. Methods	46
3.2. Evaluation of limiting molar conductance (Λ_0) and association constant (K_A) of electrolytic salts by Shedlovsky technique	47
3.3. Evaluation of limiting molar conductance (Λ_0) and association	

constant (K_A) of electrolytic salts by Fuoss technique	49
3.4. Evaluation of limiting molar conductance of triple ion (Λ_0^T) and triple ion formation constant (K_T) of electrolytic salts by Fuoss-Kraus technique	51
3.5. Evaluation of thermodynamic parameters	52
3.6. Calculation of walden product	53
3.7. Calculation of solvation number	54
3.8. Calculation of diffusion coefficient	55
3.9. Physical Measurements	55
3.9.1. Conductance measurements	55
3.9.2. Temperature control	55
3.9.3. Measurement of weights	55
3.9.4. Computations	56
3.10. Materials	57
3.10.1. Ligands	57
3.10.2. Preparation of compounds/ complexes	59
3.11. Elemental analysis of few complexes	63
CHAPTER-4. RESULTS AND DISCUSSIONS	64
4.1. Ion association of copper complexes in aqueous medium at different temperature:	
A conductance method.	64
4.1.1. Introduction	64
4.1.2. Experimental	65
4.1.2.1. Preparation of ligands and compounds	65
4.1.2.2. Conductivity measurements	65
4.1.3. Evaluation of limiting molar conductance and association constant	67
4.1.4. Evaluation of thermodynamic parameters	71
4.2. Study of N-[(benzoyl-amino)-thioxomethyl]-cystein metal (II) chloride complexes in aqueous medium at different temperatures.	73
4.2.1. Introduction	73
4.2.2. Experimental	74

4.2.2.1.	Preparation of ligands and compounds	74
4.2.2.2.	Conductivity measurements	74
4.2.3.	Evaluation of limiting molar conductance and association constant	77
4.2.4.	Evaluation of Thermodynamic parameters	80
4.3.	Physico-chemical studies of some transition metal (II) chlorides in pure methanol and water and their binaries at different temperatures	83
4.3.1.	Introduction	83
4.3.2.	Experimental	84
4.3.2.1.	Preparation of ligands and compounds	84
4.3.2.2.	Conductivity measurements	84
4.3.3.	Evaluation of limiting molar conductance, association constant, walden product and effective radius	92
4.3.4.	Evaluation of Thermodynamic parameters	98
4.4.	Ion Association and Solvation Behavior of Metal (II) Chlorides in Binary Mixtures of Methanol + Water: A Conductance Method	105
4.4.1.	Introduction	105
4.4.2.	Experimental	106
4.4.2.1.	Preparation of ligands and compounds	106
4.4.2.2.	Conductivity measurements	106
4.4.3.	Evaluation of limiting molar conductance, association constant, walden product and effective radius	118
4.4.4.	Evaluation of thermodynamic parameters	123
4.5.	Association constant of 1-butyl-4-methylpyridinium hexafluorophosphate in binary solvent of methanol, acetonitrile and dimethylsulphoxide at different temperatures.	133
4.5.1.	Introduction	133
4.5.2.	Experimental	134
4.5.3.	Evaluation of limiting molar conductance and association constant	141
4.5.4.	Calculation of walden product	146

4.5.5.	Evaluation of thermodynamic parameters	149
4.5.6.	Evaluation of bond length, surface of electron density and electrostatic potential by using a computational software Gaussian 09W, Revision A.02	155
4.6.	Association and solvation behavior of some ionic liquids ([emim]NO₃, [emim]CH₃SO₃, [emim]Tos) in pure and aqueous- tetrahydrofuran solutions at T = 298.15, 303.15 and 308.15K by physicochemical approach.	158
4.6.1.	Introduction	158
4.6.2.	Experimental	159
4.6.3.	Evaluation of limiting molar conductivity (Λ_0), the association constant (K_A), the distance of closest approach of ions (R), walden product ($\Lambda_0\eta_0$) and Gibb's energy change (ΔG^0).	166
4.6.4.	Evaluation of limiting ionic conductance (λ_0^\pm), ionic Walden product ($\lambda_0^\pm\eta_0$), Stokes' radii (r_s) and crystallographic radii (r_c) of ionic liquids.	172
4.6.5.	Evaluation of A-coefficient and solvation number.	174
4.6.6.	Evaluation of Diffusion coefficient (D_\pm) and ionic mobility (i_\pm)	176
4.6.7.	Evaluation of calculated limiting molar conductance of ion-pair (Λ_0), limiting molar conductance of triple-ion (Λ_0^T), slope and intercept.	178
4.6.8.	Calculation of Salt concentration at the minimum conductivity (c_{min}) along with the ion-pair formation constant (K_P) and triple ion formation constant (K_T)	181
4.6.9.	Evaluation of bond length, surface of electron density and electrostatic potential by using a computational software Gaussian 09W, Revision A.02	184

4.7. Theoretical and experimental study of 1-Butyl-3-Methylimidazolium Hexafluorophosphate and 1-Benzyl-3-Methylimidazolium Hexafluorophosphate by using Fuoss and Gaussian 09W, Revision A.02, program package (Gaussian Inc.)	188
4.7.1. Introduction	188
4.7.2. Experimental	189
4.7.3. Evaluation of limiting molar conductivity (Λ_0), the association constant (K_A), The distance of closest approach of ions (R) and standard deviations of experimental Λ (δ) by Fuoss conductance equation.	196
4.7.4. Evaluation of Walden product ($\Lambda_0 \cdot \eta_0$) and Gibb's energy change (ΔG°)	200
4.7.5. Evaluation of limiting ionic conductance (λ_0^\pm), ionic walden product ($\lambda_0^\pm n_0$), stokes' radii (r_s) and crystallographic radii (r_c) of ionic liquids.	202
4.7.6. Evaluation of A-coefficient and solvation number.	204
4.7.7. Evaluation of diffusion coefficient (D_\pm) and ionic mobility (i_\pm)	205
4.7.8. Evaluation of bond length, surface of electron density and electrostatic potential by using a computational software Gaussian 09W, Revision A.02	207
CHAPTER-5. CONCLUSIONS	214
