## Contents

1 Preliminaries and Introduction .......................................................... 1
   1.1 Topological notions ................................................................. 1
   1.2 Topological transformation groups ........................................... 3
   1.3 Complete invariance property .................................................. 5
   1.4 Uniform flow ............................................................................ 7
   1.5 Hyperspaces .............................................................................. 8
   1.6 Wavelet notions ........................................................................ 10
   1.7 Introduction of the thesis .......................................................... 15

2 Uniform flow ...................................................................................... 19
   2.1 Examples and motivation ............................................................ 19
   2.2 Preservation of Uniform flow ..................................................... 25

3 Hyperspaces and the CIP ................................................................... 29
   3.1 Uniform flow over hyperspaces .................................................. 29
   3.2 The CIP over hyperspaces .......................................................... 33

4 Hyperspaces and S-equivariant complete invariance property .......... 35
   4.1 S-ECIP on metric spaces ............................................................. 35
   4.2 S-ECIP on hyperspaces ............................................................... 38

5 The CIPH on frame wavelet spaces .................................................. 41
   5.1 Frames and frame wavelets ......................................................... 42
   5.2 Some results related to the CIPH ............................................... 46
   5.3 Frame wavelet spaces and the CIPH .......................................... 48
   5.4 Super-wavelets and the CIPH ...................................................... 53

Bibliography ......................................................................................... 57
