ACKNOWLEDGMENTS

I am deeply indebted to the guidance, support, and encouragement of my family, friends, and especially my advisor Dr. Dilip C. Nath. Dr. Nath has been an incredible mentor and guide. Through his academic advice and our collaboration, he continually challenges me to think of innovative methodology in meaningful ways. Dr. Nath has introduced me to important research questions in the field of Demography and provided invaluable advice. Dr. Nath’s philosophy of the research process is both exciting and fulfilling. I believe his question - “Who are you trying to convince of what and why? – our readers or audiences” will ground me for my entire career in Population Studies.

I am especially indebted to Dr. Jyotiprasad Medhi. He is not only my father but also a friend, mentor, and guide throughout my professional and personal career. I always took his advice to follow the path of higher studies. I feel myself as the luckiest person on earth to be inspired by the persons like Dr. Nath and Dr. Medhi in completing this important academic challenge in my career.

Many kind and wonderful people have helped and guided me in preparation for this most recent experience. I have taken away valuable lessons from each of them. Late Dr. Haren Choudhury first exposed me to the ideas and methodology of demography, and population research. Late Choudhury’s openness towards working with young graduate students made a profound impact on me.

Dr. Daryl Pregibon of Google (formerly AT&T Bell Labs) taught me the power of statistical analysis. A good statistician, although Dr. Pregibon is certainly a well-known statistician, can stick his or her fingers in everyone’s business, often where they are not welcome but ultimately needed. I could never have imagined learning so much about SAS and Statistical computing and Dr. Rajinder Koshal of Ohio University, USA gave me the chance to teach Statistics/Econometrics and develop a profound respect for this important challenge.

I am extremely grateful to Dr. Dipak Chand Jain of INSEAD, Paris for all his teachings during my graduate studies and for his encouragements. I learned a great deal about statistical methodology, computing, and the research process.

I am also grateful for the many opportunities afforded to me at the Stokes Library of the Woodrow Wilson School of Public Policy at Princeton University, New Jersey, USA. I benefited greatly from the many resources at Rutgers University, Princeton University and Gauhati University.

I am deeply respectful to my family. My mother Mrs. Prity Medhi, husband Mr. Niren Choudhury, daughter Dr. Namrata Gargee Jain, M.D. (Harvard University),
son-in-law Dr. Sachin Jain, M.D. (Harvard University), son Abhishek Vikram, and my brother Dr. Deepankar Medhi (University of Missouri at Kansas City) have given me unaccountably infinite support and guidance. My parents’ fifty-plus year goal has always been providing their children with the best education possible, which they believed could carry my sister, my two brothers and me anywhere.

I can only hope to imbue the same importance of education to my children
